Cherulnik, 1993-07-30 Describes thirteen cases in which architects city planners and designers used psychological theory and research to make their work more responsive to the needs of people Perspectives on Environment and Behavior Daniel Stokols, 2013-11-11 The inception of this volume can be traced to a series of Environmental Psychology Colloquia presented at the University of California Irvine during the spring of 1974 These colloquia were held in conjunction with Social Ecology 252 a graduate seminar on Man and the Environment Although the eight colloquia covered a wide range of topics and exemplified a diversity of research techniques they seemed to converge on some common theoretical and methodological assumptions about the nature of environment behavioral research The apparent continuities among these colloquia suggested the utility of developing a manuscript that would provide a historical overview of research on

environment and behavior a representation of its major concerns and an analysis of its conceptual and empirical trends. Thus expanded versions of the initial presentations were integrated with a supplemental set of invited manuscripts to yield the present volume of original contributions by leading researchers in the areas of ecological and environmental psychology.

Person-environment-behavior Research Douglas Amedeo, Reginald G. Golledge, Robert John Stimson, 2009-01-01 Research into spatial influences on people's everyday activities and experiences presents many conceptual and methodological complexities. Written by leading authorities, this book provides a comprehensive framework for collecting and analyzing reliable person-environment-behavior data in real-world settings that rarely resemble the controlled conditions described in typical texts. An array of research designs are illustrated in chapter-length examples addressing such compelling issues as spatial patterns of voting behavior, ways in which disabilities affect people's travel and wayfinding, how natural and built environments evoke emotional responses, spatial factors in elementary teaching and learning, and more. A special chapter guides the student or beginning researcher to craft a successful research proposal. **EDRA; Proceedings of the Annual Environmental Design Research Association Conference** Environmental Design Research Association, 2006

Advances in Environmental Psychology (Volume 5) Andrew Baum, Jerome E. Singer, 2020-09-10 The development of a field or an area of inquiry is often marked by changes in measurement techniques, shifts in analytic emphasis, and disputes over the best ways of doing research. In many areas of psychology, a number of issues have characterized the methodological evolution of the discipline, including questions regarding context and reductionism or laboratory versus field research. For some of the newer areas in psychology, such as environment or health psychology, this is not an issue of either/or. Although there has been some debate about these trade-offs, it is generally regarded by people in this field that some combination of the two approaches is essential. Depending on the question being studied, this balance may change. However, the questions asked are less likely to inquire which way is better and concentrate on how both may be used. This observation serves to illustrate the fact that different research endeavors have different methodological issues. Originally published in 1985, this volume explores some of the issues characterizing work on health, environment, and behavior. **Architecture Reading**
