Part II, Cell and Molecular Biology of Cells of the Nervous System, examines the basic properties of nerve cells, including the generation and conduction of propagated signaling. Part III, Synaptic Transmission, focuses on the electrophysiological and molecular mechanism of synaptic transmission, with chapters on neuronal excitability, neurotransmitters, and transmitter release. Part IV, Perception, discusses the various aspects of sensory perception, including how information from the primary organs of sensation is transmitted to and processed by the central nervous system. Part V, Movement, considers the neural mechanisms underlying movement and examines a new treatment that addresses how the basal ganglia regulate the selection of motor actions and instantiate reinforcement learning. Part VI, The Biology of Emotion, Motivation, and Homeostasis, examines the neural mechanisms by which subcortical areas mediate homeostatic control mechanisms, emotions, and motivation. Part VII, Development and the Emergence of Behavior, looks at the nervous system from early embryonic differentiation to the formation and elimination of synapses. Part VIII, Learning, Memory, Language, and Cognition, expands on the previous section, examining the cellular mechanisms of implicit and explicit memory storage, as well as decision making and consciousness. Part IX, explores the neural mechanisms underlying diseases and disorders of the nervous system, including autism spectrum disorder, epilepsy, schizophrenia, and anxiety.
