Methods Of Algebraic Geometry:

Methods of Algebraic Geometry: Volume 1 W. V. D. Hodge, D. Pedoe, 1994-03-10 This classic work first published in 1947 in three volumes provides a lucid and rigorous account of the foundations of modern algebraic geometry. The authors have confined themselves to fundamental concepts and geometrical methods and do not give detailed developments of geometrical properties but geometrical meaning has been emphasized throughout. This first volume is divided into two parts. The first is devoted to pure algebra: the basic notions, the theory of matrices over a non commutative ground field and a study of algebraic equations. The second part is in n dimensions. It concludes with a purely algebraic account of collineations and correlations.

Methods of Algebraic Geometry: Volume 2 W. V. D. Hodge, Daniel Pedoe, 1994-05-19 All three volumes of Hodge and Pedoe's classic work have now been reissued. Together these books give an insight into algebraic geometry that is unique and unsurpassed.

Pedoe, 2010-02-08 In the third volume the authors discuss algebraic varieties on a ground field without characteristic and deal with more advanced geometrical methods such as valuation theory.

Effective Methods in Algebraic Geometry T. Mora, C. Traverso, 1991-05-01 Methods of Algebraic Geometry in Control Theory: Part I Peter Falb, 2018-08-25 An introduction to the ideas of algebraic geometry in the motivated context of system theory. Thus the author describes his textbook that has been specifically written to serve the needs of students of systems and control. Without sacrificing mathematical care the author makes the basic ideas of algebraic geometry accessible to engineers and applied scientists. The emphasis is on constructive methods and clarity rather than abstraction. The student will find here a clear presentation with an applied flavor of the core ideas in the algebraic geometric treatment of scalar linear system theory. The author introduces the four representations of a scalar linear system and establishes the major results of a similar theory for multivariable systems appearing in a succeeding volume. Part II: Multivariable Linear Systems and Projective Algebraic Geometry. Prerequisites are the basics of linear algebra, some simple notions from topology and the elementary properties of groups, rings and fields and a basic course in linear systems. Exercises are an integral part of the treatment and are used where relevant in the main body of the text. The present softcover reprint is designed to make this classic textbook available to a wider audience. This book is a concise development of affine algebraic geometry together with very explicit links to the applications and should address a wide community of readers among pure and applied mathematicians. Effective Methods in Algebraic Geometry T. Mora, C. Traverso, 2012-12-06 The symposium MEGA 90 Effective Methods in Algebraic Geometry was held in Castiglioncello Livorno Italy in April 17-21 1990. The themes we quote from the Call for papers were the following: Effective methods and complexity issues in commutative algebra, projective geometry, real geometry, algebraic number theory, Algebraic geometric methods in algebraic computing. Contributions in

related fields computational aspects of group theory differential algebra and geometry algebraic and differential topology etc were also welcome The origin and the motivation of such a meeting that is supposed to be the first of a series deserves to be explained The subject the theory and the practice of computation in algebraic geometry and related domains from the mathematical viewpoint has been one of the themes of the symposia organized by SIGSAM the Special Interest Group for Symbolic and Algebraic Manipulation of the Association for Computing Machinery SAME Symbolic and Algebraic Manipulation in Europe and AAECC the semantics of the name is varying an average meaning is Applied Algebra and Error Correcting Codes
