14. CONCLUSION

The metrics are used for the development of the process efficiency and product effectiveness in software engineering. The software metrics can help the software professionals to make unambiguous software attributes of software processes and products more visible [27-29]. Further, measurement includes quantitative evaluations of software and usually metrics can be used directly to determine achievements of quality goals quantitatively. The current software management is ineffective due to software development which is extremely complex. An attempt has been made to concentrate on the overview [1-29] of the software measurement model of software engineering , characteristics of software measure, broad types of software measurement in software industry, properties of software measurement in software engineering, principles of software measurement in software engineering, general activities of software measurement in software engineering, the importance of software metrics in software industry, the characteristics of software metrics in software engineering, history of software metrics in software engineering, generations of software metrics in software engineering, types of software metrics in software engineering, limitations of software metrics in software industry. This research can be further extended based on concepts and methodology of software measurement and metrics in software engineering.
