Ericksen, David Kinderlehrer, Robert Kohn, J.-L. Lions, 2012-12-06 This IMA Volume in Mathematics and its Applications Homogenization and Effective Moduli of Materials and Media represents the proceedings of a workshop which was an integral part of the 19R4 R5 IMA program on CONTINUUM PHYSICS AND PARTIAL DIFFERENTIAL EQUATIONS We are grateful to the Scientific Committee J L Ericksen D Kinderlehrer H Brezis C Dafermos for their dedication and hard work in developing an imaginative stimulating and productive year long program George R Sell Hans Weinberger PREFACE The papers in this volume were presented at a workshop on homogenization of differential equations and the determination of effective moduli of materials and media primarily in the context of continuum theory These areas are closely linked to a variety of phenomena such as the elastic and dielectric responses of composites and the effective properties of shales and soils For instance the ability to predict the effective stiffness response of a composite across a broad range of frequencies allows its performance under given circumstances to be assessed by means of nondestructive testing A fundamental mathematical tool is homogenization the study of partial differential equations with rapidly varying coefficients or boundary conditions The recent alliance of homogenization with optimal design has stimulated the development of both fields The presentations at the workshop emphasized recent advances and open questions Abstracts from the Workshop on Oscillation Theory, Computation, and Methods of Compensated Compactness, 01-06.04.1985, 1985 **Mathematical Problems of Classical Nonlinear Electromagnetic Theory** Frederick Bloom, 2020-11-29 A survey of some problems of current interest in the realm of classical nonlinear electromagnetic theory **Computational Gasdynamics** Culbert B. Laney, 1998-06-13 Numerical methods are indispensable tools in the analysis of complex fluid flows This book focuses on computational techniques for high speed gas flows especially gas flows containing shocks and other steep gradients The book decomposes complicated numerical methods into simple modular parts showing how each part fits and how each method relates to or differs from others The text begins with a review of gasdynamics and computational techniques Next come basic principles of computational gasdynamics The last two parts cover basic techniques and advanced techniques Senior and graduate level students especially in aerospace engineering as well as researchers and practising engineers will find a wealth of invaluable information on high speed gas flows in this text *Weak Convergence Methods for Nonlinear Partial Differential Equations* Lawrence C.
