The Art and Craft of Play Directing David Stevens,2013-03-13 Theatre is an interpretive art based upon a director's emotional reaction to reading a play and imagining a production of that play Before the audience experiences the production the director must go through a process part art and part craft to create it This book is intended to introduce undergraduate students with a solid theatre background to that process Stevens includes chapters covering theatre and art the interpretation of the script composition and movement working with actors and matters of style Each chapter contains exercises in order for students to consolidate what they have learned The complete text of John Millington Synge's *Riders to the Sea* is included as an example and study text and Stevens relates many examples from his own rich directing background Twenty production photos two sample floor

plans and numerous diagrams round out the text. The study of directing is a life long project and in this book Stevens provides a basis for that study *Curriculum and Imagination* James McKernan, 2007-08-07 Curriculum and Imagination describes an alternative process model for designing developing implementing and evaluating curriculum suggesting that curriculum may be designed by specifying an educational process which contains key principles of procedure. This comprehensive and authoritative book offers a practical and theoretical plan for curriculum making without objectives shows that a curriculum can be best planned and developed at school level by teachers adopting an action research role complements the spirit and reality of much of the teaching profession today embracing the fact that there is a degree of intuition and critical judgement in the work of educators presents empirical evidence on teachers human values Curriculum and Imagination provides a rational and logical alternative for all educators who plan curriculum but do not wish to be held captive by a mechanistic ends means notion of educational planning. Anyone studying or teaching curriculum studies or involved in education or educational planning will find this important new book fascinating reading *The Uttal Tetralogy of Cognitive Neuroscience* William R. Uttal, 2022-07-30 These four volumes originally published between 1973 and 1988 were intended to provide a broad survey of cognitive neuroscience a field known variously as physiological psychology or psychobiology in the 1970s and 1980s when the books were written. The general goal was to summarize what was known about the relation between brain and mind at that time with an emphasis on sensory and perceptual topics. Out of print for many years the Tetralogy is now available again as a set for the first time which is as the author envisaged it or as individual volumes *A Taxonomy of Visual Processes* William R. Uttal, 2014-06-27 Originally published in 1981 this third volume deals with the empirical data base and the theories concerning visual perception the set of mental responses to photic stimulation of the eyes. As the book develops the plan was to present a general taxonomy of visual processes and phenomena. It was hoped that such a general perspective would help to bring some order to the extensive but largely unorganized research literature dealing with our immediate perceptual responses to visual stimuli at the time. The specific goal of this work was to provide a classification system that integrates and systematizes the data base of perceptual psychology into a comprehensive intellectual scheme by means of an eclectic multi level metatheory invoking several different kinds of explanation.

Ethics and Security Aspects of Infectious Disease

Control Assoc Prof Michael J Selgelid, Dr Christian Enemark, 2012-12-28 The increasing emergence, re-emergence and spread of deadly infectious diseases which pose health, economic, security and ethical challenges for states and people around the world has given rise to an important global debate. The actual or potential burden of infectious diseases is sometimes so great that governments treat them as threats to national security. However, such treatment potentially increases the risk that emergency disease control measures will be ineffective, counterproductive and/or unjust. Research on ethical issues associated with infectious disease is a relatively new and rapidly growing area of academic inquiry, as is research on infectious diseases within the field of security studies. This volume incorporates ethical and security perspectives, thus furthering research in both fields. Its unique focus on the intersection of ethical and security dimensions will furthermore generate fresh insights on how governments should respond to infectious disease challenges. Readers should include professionals and scholars working in infectious disease epidemiology, public health, health law, health economics, public policy, bioethics, medical humanities, health and human rights, social political philosophy, security studies and international politics.
