Meta Logics And Logic Programming:

　　Meta-Logics and Logic Programming Krzysztof Apt,Franco Turini,2003-02-01 Investigating meta programming within the logic programming paradigm Meta Logics and Logic Programming presents original research on an important extension of logic programming that makes it more amenable for knowledge representation and programming in general The 12 contributions many written especially for this book explore the foundations language design issues and applications of meta programming in logic programming Meta programming the process of writing computer programs that can manipulate representations of other programs has been key both in the foundations of computer science and in its practical developments Examples of meta programs include compilers interpreters program analyzers and partial evaluators The choice of logic programming as a basis for meta programming offers several practical and theoretical advantages among them the possibility of tackling critical foundational problems of meta programming within a strong theoretical framework and the surprising ease of programming The usual framework of logic programming and more generally first order logic however has to be modified and extended to formally deal with meta programs extensions the editors call meta logics Along with an exploration of meta programming in logic programming the definitions formal properties and use of these extensions constitute one of the book s main themes The first part of the book Foundations focuses on the representation problem how object programs are represented within meta programs The second part Language Support for Meta Logics is concerned with language extensions that make meta programming easier and more elegant The third part Meta Logics for Knowledge Management deals with the use of meta logic for advanced knowledge representation purposes **Computational Logic: Logic Programming and Beyond** Antonis C. Kakas,Fariba Sadri,2003-08-02 Alan Robinson This set of essays pays tribute to Bob Kowalski on his 60th birthday an anniversary which gives his friends and colleagues an excuse to celebrate his career as an original thinker a charismatic communicator and a forceful intellectual leader The logic programming community hereby and herein conveys its respect and thanks to him for his pivotal role in creating and fostering the conceptual paradigm which is its raison d tre The diversity of interests covered here reflects the variety of Bob s concerns Read on It is an intellectual feast Before you begin permit me to send him a brief personal but public message Bob how right you were and how wrong I was I should explain When Bob arrived in Edinburgh in 1967 resolution was as yet fairly new having taken several years to become at all widely known Research groups to investigate various aspects of resolution sprang up at several institutions the one organized by Bernard Meltzer at Edinburgh University being among the first For the half dozen years that Bob was a leading member of Bernard s group I was a frequent visitor to it and I saw a lot of him We had many discussions about logic computation and language **Meta-logics for Logic Programming** Marianne Baukje Kalsbeek,1995 **Logic Program Synthesis and Transformation** Norbert E. Fuchs,2003-05-20 This volume contains the papers from the Seventh International Workshop on Logic Program Synthesis and Transformation LOPSTR 97 that took place

in Leuven Belgium on July 10 12 1997 back to back with the Fourteenth International Conference on Logic Programming ICLP 97 Both ICLP and LOPSTR were organised by the K U Leuven Department of Computer Science LOPSTR 97 was sponsored by Compulog Net and by the Flanders Research Network on Declarative Methods in Computer Science LOPSTR 97 had 39 participants from 13 countries There were two invited talks by Wolfgang Bibel Darmstadt on A multi level approach to program synthesis and by Henning Christiansen Roskilde on Implicit program synthesis by a reversible metainterpreter Extended versions of both talks appear in this volume There were 19 technical papers accepted for presentation at LOPSTR 97 out of 33 submissions Of these 15 appear in extended versions in this volume Their topics range over the fields of program synthesis program transformation program analysis tabling metaprogramming and inductive logic programming **Meta-programming in Logic Programming** Harvey Abramson,M. H. Rogers,1989 Meta programs which treat other computer programs as data include compilers editors simulators debuggers and program transformers Because of the wide ranging applications meta programming has become a subject of considerable practical and theoretical interest This book provides the first comprehensive view of topics in the theory and application of meta programming covering problems of representation and of soundness and correctness of interpreters analysis and evaluation of meta logic programs and applications to sophisticated knowledge based systems Harvey Abramson is Reader in Computer Science at the University of Bristol England M H Rogers is Professor of Computer Science also at the University of Bristol Meta Programming in Logic Programming is in the series Logic Programming Research Reports and Notes edited by Ehud Shapiro **10th International Conference on Automated Deduction** Mark E. Stickel,1990 This volume contains the papers presented at the 10th International Conference on Automated Deduction CADE 10 CADE is the major forum at which research on all aspects of automated deduction is presented Although automated deduction research is also presented at more general artificial intelligence conferences the CADE conferences have no peer in the concentration and quality of their contributions to this topic The papers included range from theory to implementation and experimentation from propositional to higher order calculi and nonclassical logics they refine and use a wealth of methods including resolution paramodulation rewriting completion unification and induction and they work with a variety of applications including program verification logic programming deductive databases and theorem proving in many domains The volume also contains abstracts of 20 implementations of automated deduction systems The authors of about half the papers are from the United States many are from Western Europe and many too are from the rest of the world The proceedings of the 5th 6th 7th 8th and 9th CADE conferences are published as Volumes 87 138 170 230 310 in the series Lecture Notes in Computer Science PUBLISHER S WEBSITE Logic Program Synthesis and Transformation ,1996 *From Logic Programming to Prolog* Krzysztof R. Apt,1997 Provides a systematic introduction to the theory of logic programming and shows how this theory can be applied to reason about pure Prolog programs The text includes an introduction to programming in Prolog and deals with such

programming issues as determination occur check freedom and absence of errors It covers both the natural interpretations of logic programming as declarative specification and as procedure for computer execution *Computer Programming to Insure Project Accountability in Africa* Abdul Karim Bangura,2001 This is the first book of its kind to offer a series of computer programming models for the practical purpose of insuring project accountability in African countries Despite its practicality the book is also theoretically well grounded By doing so it seeks to extend the epistemological boundaries of both Computer Science and Economics It is therefore useful for students and teachers in those disciplines and for policy makers and practitioners in the field of economic development **Encyclopedia of Microcomputers** Allen Kent,James G. Levesque,1999-06-07 It is a pleasure and an honor to be able to present this collection of papers to Ray Reiter on the occasion of his 60th birthday To say that Ray s research has had a deep impact on the field of Artificial Intel ligence is a considerable understatement Better to say that anyone thinking of do ing work in areas like deductive databases default reasoning diagnosis reasoning about action and others should realize that they are likely to end up proving corol laries to Ray s theorems Sometimes studying related work makes us think harder about the way we approach a problem studying Ray s work is as likely to make us want to drop our way of doing things and take up his This is because more than a mere visionary Ray has always been a true leader He shows us how to proceed not by pointing from his armchair but by blazing a trail himself setting up camp and waiting for the rest of us to arrive The International Joint Conference on Ar tificial Intelligence clearly recognized this and awarded Ray its highest honor the Research Excellence award in 1993 before it had even finished

acknowledging all the founders of the field The papers collected here sample from many of the areas where Ray has done pi
oneering work One of his earliest areas of application was databases and this is re flected in the chapters by Bertossi et at
and the survey chapter by Minker   *Proceedings of the Symposium on Partial Evaluation and Semantics-Based Program
