## Metaheuristics Computer Decisionmaking:

**Metaheuristics** Mauricio G.C. Resende, J. Pinho de Sousa, 2003-11-30 Combinatorial optimization is the process of finding the best or optimal solution for problems with a discrete set of feasible solutions. Applications arise in numerous settings involving operations management and logistics such as routing, scheduling, packing, inventory and production management, location logic and assignment of resources. The economic impact of combinatorial optimization is profound, affecting sectors as diverse as transportation, airlines, trucking, rail and shipping, forestry, manufacturing, logistics, aerospace, energy, electrical power, petroleum and natural gas, telecommunications, biotechnology, financial services and agriculture. While much progress has been made in finding exact provably optimal solutions to some combinatorial optimization problems using techniques such as dynamic programming, cutting planes and branch and cut methods, many hard combinatorial problems are still not solved exactly and require good heuristic methods. Moreover, reaching optimal solutions is in many cases meaningless as in practice we are often dealing with models that are rough simplifications of reality. The aim of heuristic methods for combinatorial optimization is to quickly produce good quality solutions without necessarily providing any guarantee of solution quality. Metaheuristics are high level procedures that coordinate simple heuristics such as local search to find solutions that are of better quality than those found by the simple heuristics alone. Modern metaheuristics include simulated annealing, genetic algorithms, tabu search, GRASP, scatter search, ant colony optimization, variable neighborhood search and their hybrids.

[Metaheuristics for Business Analytics](#) Abraham Duarte, Manuel Laguna, Rafael Marti, 2017-11-24 This essential metaheuristics tutorial provides descriptions and practical applications in the area of business analytics. It addresses key problems in predictive and prescriptive analysis while also illustrating how problems that arise in business analytics can be modelled and how metaheuristics can be used to find high quality solutions. Readers will be introduced to decision making problems for which metaheuristics offer the most effective solution technique. The book not only shows business problem modelling on a spreadsheet but also how to design and create a Visual Basic for Applications code. Stanley Lee, 2018-12-14 This book offers a comprehensive overview of cutting edge approaches for decision making in hierarchical organizations. It presents soft computing based techniques including fuzzy sets, neural networks, genetic algorithms and particle swarm optimization, and shows how these approaches can be effectively used to deal with problems typical of this kind of organization. After introducing the main classical approaches applied to multiple level programming, the book describes a set of soft computing techniques demonstrating their advantages in providing more efficient solutions to hierarchical decision making problems compared to the classical methods. Based on the book *Fuzzy and Multi Level Decision Making* Springer 2001 by Lee E S and Shih H, this second edition has been expanded to include the most recent findings and methods and a broader spectrum of soft computing approaches. All the algorithms are presented in detail together with a wealth of practical examples and solutions to real world problems, providing students, researchers and professionals with a timely, practice oriented reference guide to the area of interactive fuzzy decision making, multi level programming and hierarchical optimization. **Optimization and Computing using Intelligent Data-Driven Approaches for Decision-Making** Irfan Ali, Umar Muhammad Modibbo, Asaju La'aro Bolaji, Harish Garg, 2024-12-26 This book comprehensively discusses nature inspired algorithms, deep learning methods, applications of mathematical programming and artificial intelligence techniques.
