Metallization And Metal Semiconductor Interfaces:

Metallization and Metal-Semiconductor Interfaces Inder P. Batra, 2012-12-06 This book represents the work presented at a NATO Advanced Research Workshop on Metallization and Metal Semiconductor Interfaces held at the Technical University of Munich Garching W Germany from 22-26 August 1988. The major focus of the workshop was to evaluate critically the progress made in the area of metal semiconductor interfaces. The underlying theme was the mechanism of Schottky barrier formation and a serious assessment of the various models. A significant fraction of the workshop time was also spent in discussing the interaction of alkali metals with semiconductors. Alkali metals on semiconductors form ordered overlayers and the resulting system often exhibits one-dimensional metallic properties. The nature of their interaction has introduced new and exciting complexities and this was pursued at length during the lively discussions at the workshop. A half a day was devoted to Scanning Tunneling Microscopy, the emphasis being on its utility in providing structural and electronic character of low coverage regime. The book should provide readers with the most current status of the research activity in the general area of metal semiconductor interfaces at an international level. It should also serve as an excellent introduction to the field since sufficient review type of material has also been included. The workshop organizers: Dr I P Batra, Director, MM Almaden Research Center, San Jose; Prof S Ciraci, Bilkent University, Ankara; Prof C Y Pong, University of California, Davis; Prof Dr F Koch, Local Chairman, Technical University, Munich Garching; Dr H *Concise Encyclopedia of Semiconducting Materials & Related Technologies* S. Mahajan, L. C. Kimerling, 2013-10-22 The development of electronic materials and particularly advances in semiconductor technology have played a central role in the electronics revolution by allowing the production of increasingly cheap and powerful computing equipment and advanced telecommunications devices. This Concise Encyclopedia, which incorporates relevant articles from the acclaimed Encyclopedia of Materials Science and Engineering as well as newly commissioned articles, emphasizes the materials aspects of semiconductors and the technologies important in solid state electronics. Growth of bulk crystals and epitaxial layers are discussed in the volume and coverage is included of defects and their effects on device behavior. Metallization and passivation issues are also covered. Over 100 alphabetically arranged articles written by world experts in the field are each intended to serve as the first source of information on a particular aspect of electronic materials. The volume is extensively illustrated with photographs, diagrams, and tables. A bibliography is provided at the end of each article to guide the reader to recent literature. A comprehensive system of cross references, a three-level subject index, and an alphabetical list of articles are included to aid readers in the abstraction of information. *Advanced Metallization and Processing for Semiconductor Devices and Circuits - II: Volume 260* Avishay Katz, 1992-10-28 The MRS Symposium Proceedings series is an internationally recognised reference suitable for researchers and practitioners.
