Metaphysics is a philosophical discipline concerned with exploring the basic principles that govern the nature of reality.

Metaphysics explores abstract concepts to gain a deeper understanding of the world and the universe, with the goal of uncovering truths that are not easily seen in everyday life.

## Metaphysics The Science Of Life:

The Metaphysics of Science and Aim-Oriented Empiricism Nicholas Maxwell, 2019-03-09 This book gives an account of work that I have done over a period of decades that sets out to solve two fundamental problems of philosophy the mind body problem and the problem of induction Remarkably these revolutionary contributions to philosophy turn out to have dramatic implications for a wide range of issues outside philosophy itself most notably for the capacity of humanity to resolve current grave global problems and make progress towards a better wiser world A key element of the proposed solution to the first problem is that physics is about only a highly specialized aspect of all that there is the causally efficacious aspect Once this is understood it ceases to be a mystery that natural science says nothing about the experiential aspect of reality the colours we perceive the inner experiences we are aware of That natural science is silent about the experiential aspect of reality is no reason whatsoever to hold that the experiential does not objectively exist A key element of the proposed solution to the second problem is that physics in persistently accepting unified theories only thereby makes a substantial metaphysical assumption about the universe it is such that a unified pattern of physical law runs through all phenomena We need a new conception and kind of physics that acknowledges and actively seeks to improve metaphysical presuppositions inherent in the methods of physics The problematic aims and methods of physics need to be improved as physics proceeds These are the ideas that have fruitful implications I set out to show for a wide range of issues for philosophy itself for physics for natural science more generally for the social sciences for education for the academic enterprise as a whole and most important of all for the capacity of humanity to learn how to solve the grave global problems that menace our future and thus make progress to a better wiser world It is not just science that has problematic aims in life too our aims whether personal social or institutional are all too often profoundly problematic and in urgent need of improvement We need a new kind of academic enterprise which helps humanity put aims and methods improving meta methods into practice in personal and social life so that we may come to do better at achieving what is of value in life and make progress towards a saner wiser world This body of work of mine has met with critical acclaim Despite that astonishingly it has been ignored by mainstream philosophy In the book I discuss the recent work of over 100 philosophers on the mind body problem and the metaphysics of science and show that my earlier highly relevant work on these issues is universally ignored the quality of subsequent work suffering as a result My hope in publishing this book is that my fellow philosophers will come to appreciate the intellectual value of my proposed solutions to the mind body problem and the problem of induction and will as a result join with me in attempting to convince our fellow academics that we need to bring about an intellectual institutional revolution in academic inquiry so that it takes up its proper task of helping humanity learn how to solve problems of living including global problems and make progress towards as good as wise and enlightened a world as possible *Metaphysics, Science of Life* Anthony J.

**Sciences** Andrea Borghini,Elena Casetta,2019-03-07 Over the last fifty years biology and life sciences have suggested many multifaceted challenges for metaphysics The Metaphysics of Life Sciences is the first study of these challenges This systematic study focuses on classical metaphysical debates such as the divide between structural realism and antirealism and the disputes between monists and pluralists and essentialism and anti essentialism Divided into three parts it covers amorphous reality out of which life organisms and biological individuals are singled out and the means by which living entities are sorted closely examining how entities are organized in a whole and whether bioengineered entities should be included in that whole or rather considered as artificial kinds The final part of this study looks at microevolution macroevolution and epigenetic behavioural and cultural evolutions By exploring the main issues that recent developments of biology and life sciences pose to metaphysicians The Metaphysics of Life Sciences reveals the potential influence of this fast growing branch of philosophy over classical fields such as metaphysics
