Methodes D Integration De Poincare Et Le:

Les méthodes d'intégration de Poincaré et le problème général de la balistique extérieure Kyrille Popoff, 1925 Les méthodes d'intégration de Poiucaré et le problème général de la balistique extérieure Kyrille Popoff, 1925 Sur les méthodes d'intégration de Lie et les problèmes de la mécanique céleste Erik Wilhelm Englund, 1916 **La correspondance entre Henri Poincaré, les astronomes, et les géodésiens** Scott A. Walter, Philippe Nabonnand, Ralf Krömer, Martina Schiavon, 2016-07-14 The letters in this volume cover Poincaré's multifaceted career in astronomy in its entirety extending from the time of his first publications in 1880 to the end of his life in 1912. At a tender age Poincaré established his authority in questions of celestial mechanics and his views were soon sought after on a vast array of questions by the leading astronomers and geodesists of his time including C. V. L. Charlier, G. H. Darwin, H. Faye, F. R. Helmert, G. W. Hill, A. Lindstedt, A. M. Liapunov, N. Lockyer, S. Newcomb, K. Schwarzschild, and F. Tisserand. Poincaré and his correspondents take up topics ranging from the three-body problem and perturbation theory to the determination of the geoid and the equilibrium figures of rotating fluid masses. The volume also sheds light on Poincaré's three terms as president of the Bureau of Longitudes where he guided French astronomy and geodesy through ambitious projects such as the measurement of an arc of meridian near Quito. Les lettres du troisième volume de la Correspondance de Poincaré scandent toute son œuvre astronomique allant de ses premiers mémoires sur les courbes définies par une équation différentielle 1881 jusqu'aux analyses des hypothèses cosmogoniques 1911. Encore très jeune Poincaré s'est fait remarquer pour sa maîtrise des questions de la mécanique céleste de telle sorte que les astronomes et les géodésistes l'ont souvent interpellé y compris O. Callandreau, C. V. L. Charlier, G. H. Darwin, F. R. Helmert, A. Lindstedt, A. M. Lyapunov, Simon Newcomb, Karl Schwarzschild et F. Tisserand. Avec ses correspondants Poincaré abordaient les questions principales de l'astronomie mathématique du célèbre problème des trois corps, la théorie des perturbations et aux figures d'équilibre des masses fluides en rotation. La correspondance de Poincaré dit et annoté dans ce volume concerne au-delà des mémoires mathématiques l'activité de Poincaré en tant que Professeur d'astronomie mathématique et de mécanique céleste à la Sorbonne, rédacteur en chef du Bulletin astronomique et membre du Bureau des longitudes que Poincaré a pris trois reprises. Sa correspondance illumine dans ce dernier cadre la réalisation de la mesure d'un arc de méridien à Quito et le règlement d'un différend franco-britannique propos de la différence de longitude entre Greenwich et Paris.

The Mathematical Heritage of Henri Poincaré Felix E. Browder, 1983-12-31 On April 7-10 1980 the American Mathematical Society sponsored a Symposium on the Mathematical Heritage of Henri Poincaré held at Indiana University Bloomington Indiana. This volume presents the written versions of all but three of the invited talks presented at this Symposium: those by W. Browder, A. Jaffe, and J. Mather were not written up for publication. In addition it contains two papers by invited speakers who were not able to attend: S. S. Chern and L. Nirenberg. If one traces the influence of Poincaré through the major mathematical figures of the early and mid-twentieth century it is through American mathematicians as well as

French that this influence flows through G D Birkhoff Solomon Lefschetz and Marston Morse This continuing tradition represents one of the major strands of American as well as world mathematics and it is as a testimony to this tradition as an opening to the future creativity of mathematics that this volume is dedicated This part contains sections on topological methods in nonlinear problems mechanics and dynamical systems ergodic theory and recurrence and historical material

History of Nonlinear Oscillations Theory in France (1880-1940) Jean-Marc Ginoux, 2017-04-18 This book reveals the French scientific contribution to the mathematical theory of nonlinear oscillations and its development The work offers a critical examination of sources with a focus on the twentieth century especially the period between the wars Readers will see that contrary to what is often written France's role has been significant Important contributions were made through both the work of French scholars from within diverse disciplines mathematicians physicists engineers and through the geographical crossroads that France provided to scientific communication at the time This study includes an examination of the period before the First World War which is vital to understanding the work of the later period By examining literature sources such as periodicals on the topic of electricity from that era the author has unearthed a very important text by Henri Poincaré dating from 1908 In this work Poincaré applied the concept of limit cycle which he had introduced in 1882 through his own works to study the stability of the oscillations of a device for radio engineering The discovery of this text means that the classical perspective of the historiography of this mathematical theory must be modified Credit was hitherto attributed to the Russian mathematician Andronov from correspondence dating to 1929 In the newly discovered Poincaré text there appears to be a strong interaction between science and technology or more precisely between mathematical analysis and radio engineering This feature is one of the main components of the process of developing the theory of nonlinear oscillations Indeed it is a feature of many of the texts referred to in these chapters as they trace the significant developments to which France contributed Scholars in the fields of the history of mathematics and the history of science and anyone with an interest in the philosophical underpinnings of science will find this a particularly engaging account of scientific discovery and scholarly communication from an era full of exciting developments

Henri Poincaré, 1912-2012 Bertrand Duplantier, Vincent Rivasseau, 2014-11-14 This thirteenth volume of the Poincaré Seminar Series Henri Poincaré 1912-2012 is published on the occasion of the centennial of the death of Henri Poincaré in 1912 It presents a scholarly approach to Poincaré's genius and creativity in mathematical physics and mathematics Its five articles are also highly pedagogical as befits their origin in lectures to a broad scientific audience Highlights include Poincaré's Light by Olivier Darrigol a leading historian of science who uses light as a guiding thread through much of Poincaré's physics and philosophy from the application of his superior mathematical skills and the theory of diffraction to his subsequent reflections on the foundations of electromagnetism and the electrodynamics of moving bodies the authoritative Poincaré and the Three Body Problem by Alain Chenciner who offers an exquisitely detailed hundred page perspective peppered with vivid excerpts from citations on the monumental work of

Poincaré on this subject from the famous King Oscar's 1889 memoir to the foundations of the modern theory of chaos in *Les méthodes nouvelles de la mécanique céleste*. A profoundly original and scholarly presentation of the work by Poincaré on probability theory is given by Laurent Mazliak in *Poincaré's Odds* from the incidental first appearance of the word probability in Poincaré's famous 1890 theorem of recurrence for dynamical systems to his later acceptance of the unavoidability of probability calculus in Science as developed to a great extent by Emile Borel. Poincaré's main direct disciple the article by François B. Guin *Henri Poincaré and the Uniformization of Riemann Surfaces* takes us on a fascinating journey through the six successive versions in twenty six years of the celebrated uniformization theorem which exemplifies the Master's distinctive signature in the foundational fusion of mathematics and physics on which conformal field theory string theory and quantum gravity so much depend nowadays the final chapter *Harmony and Chaos On the Figure of Henri Poincaré* by the filmmaker Philippe Worms describes the homonymous poetical film in which eminent scientists through mathematical scenes and physical experiments display their emotional relationship to the often elusive scientific truth and universal harmony and chaos in Poincaré's legacy This book will be of broad general interest to physicists mathematicians philosophers of science and historians
