## **Marx's Theory Of Scientific Knowledge:**

*Marx's Theory of Scientific Knowledge* Patrick Murray, 1990-04 This close textual study treats a neglected topic in the voluminous literature on Marx Both supporters and opponents of Marx have long assumed that he was a positivist however the author states Marx did not adopt this conventional nineteenth century view of science Schooled by Hegel Marx developed an eye for the practical historical rootedness of the concepts and the values of science The depth of Marx's inquiries into the nature of scientific knowledge places him in the company of philosopher scientists such as Aristotle and Descartes and his theory of scientific knowledge tacitly underlies the construction of his masterwork Capital making it unexpectedly dense much turns on a word a distinction a beginning Often Marx's understanding of his methodological innovations Through a close reading of Marx's few writings on method and a careful analysis of the opening chapters of Capital this book exposes this demanding quality of Marx's texts and helps in meeting those demands **Marx's Theory of Scientific Knowledge**

Patrick Murray, 1990 **What is Scientific Knowledge?** Kevin McCain, Kostas Kampourakis, 2019-06-11 What Is Scientific Knowledge is a much needed collection of introductory level chapters on the epistemology of science Renowned historians philosophers science educators and cognitive scientists have authored 19 original contributions specifically for this volume The chapters accessible for students in both philosophy and the sciences serve as helpful introductions to the primary debates surrounding scientific knowledge First year undergraduates can readily understand the variety of discussions in the volume and yet advanced students and scholars will encounter chapters rich enough to engage their many interests The variety and coverage in this volume make it the perfect choice for the primary text in courses on scientific knowledge It can also be used as a supplemental book in classes in epistemology philosophy of science and other related areas Key features an accessible and comprehensive introduction to the epistemology of science for a wide variety of students both undergraduate and graduate level and researchers written by an international team of senior researchers and the most promising junior scholars addresses several questions that students and lay people interested in science may already have including questions about how scientific knowledge is gained its nature and the challenges it faces The Scientific Marx Daniel Little, 1986 The Scientific Marx was first published in 1986 Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions Marx advanced Capital to the public as a scientific explanation of the capitalist economy intending it to be evaluated by ordinary standards of scientific adequacy Today however most commentators emphasize Marx's humanism or his theory of historical materialism over his scientific claims The Scientific Marx thus represents a break with many current views of Marx's analysis of capitalism in that it takes seriously his claim that Capital is a rigorous scientific investigation of the capitalist mode of production Daniel Little discusses the main features of Marx's account applying the tools of contemporary philosophy of science He analyzes Marx's views on theory and explanation in the social sciences the logic of Marx's empirical practices the

relation between Capital and historical materialism the centrality of micro foundations in Marx's analysis and the minimal role that dialectics plays in his scientific method Throughout Little relies on evidence taken from Marx's actual practice as a social scientist rather than from his explicit methodological writings The book contributes to current controversies in the literature of analytic Marxism joined by such authors as Jon Elster G A Cohen and John Roemer     The Political Implications of Scientific Knowledge. EU Funded Policy Research and Immigration Policies in Italy Marco Boschele, 2020-03-09 The work endeavours to assess the impact of EU funded research on both social science policy research and the policy making process at national level Attempts in the past to include the social sciences in the decision making process have raised questions about the validity of scientific knowledge in terms of its objectivity and in terms of its legitimizing element The starting point of this investigation therefore is the relationship between research and policy making Subsequently it considers the development of social science research in the field of immigration At EU level it analyses the changes in the dynamics of migration and how the EU research Framework Programmes have responded At national level it seeks to place the concept of citizenship and nationality law within the tradition of the social sciences in Italy and to understand how social science research has contributed to the development of policies The investigation also analyses the research policy approach at institutional level in Italy and the involvement of Italian universities and organizations in the FP6 and FP7 to determine if there takes place an internationalization Europeanization of social science research on immigration and or the construction of a non national discourse There is a formation of a discourse in the field of immigration research which follows the Commission directives but due to the Italian policy making process closed to academic and experts influence this discourse does not permeate the process of immigration policies making     Metaphysics and the Disunity of Scientific Knowledge Steve Clarke, 2018-10-26 First published in 1998 this volume's primary concern is to demonstrate how a metaphysics can be developed which enables us to make do in an uncertain world and to develop a pragmatic alternative to postmodernism Opposing unificationist view of science Clarke suggests needs to be understood in the context of the perceived threat of metaphysical disorder He explores this through issues including epistemology fundamentalism pluralism and idealisation and identifies a potential solution similar to the work of Otto Neurath     *National Components of Scientific Knowledge* Andrew Jamison, 1982     **Scientific Knowledge** Janet A. Kourany, 1998 Containing 31 readings reflecting the dynamism of the field this book provides readers with the most current and relevant readings available on issues in the philosophy of science All of the readings have been selected based on their clarity and coverage of the prevailing debates in the philosophy of science from logical positivism to anti realism The book assumes no specialized training in formal logic or scientific methods and therefore can be appreciated by a wide range of readers     Criteria of Social Scientific Knowledge Terrence E. Cook, 1994 Social scientists often do not agree on what is a solid contribution to knowledge and what is only the illusory appearance of knowledge In this work Terrence E Cook systematically compares and contrasts the main epistemological families within the

social sciences interpretive predictive and praxeological examining strengths and weaknesses of each outlook In exceptionally clear language he shows how paradigms of thought are constructed and reveals the often unreflected presuppositions of each epistemological family He concludes with a move toward synthesis and a turn to the study of strategy

**Selected Writings of Eduard Bernstein, 1900-1921** Eduard Bernstein, 1996 Although successive party congresses condemned Bernstein's views he was a representative of German Social Democracy in the Reichstag during the years 1902 1906 1912 1918 and 1920 1928 **The Validation of Scientific Theories** Philipp Frank, 1961 New Investigations of

Marx's Method Fred Moseley, Martha Campbell, 1997 New Investigations of Marx's Method is concerned with the philosophical principles that underlie Marx's economic theory in Capital a subject which is essential to an understanding of Capital but which has received very little attention The authors of these papers insist that a proper evaluation of Marx's theory and especially its logical coherence requires a clear and thorough understanding of his theory in terms of its own logical structure *Historical Materialism and the Economics of Karl Marx* Benedetto Croce, 1914 It is often said that it is the business of philosophy to examine and criticise the assumptions of the sciences and philosophy claims that in this work it is not an unnecessary meddler stepping in where it is not wanted For time and again for want of philosophical criticism the sciences have overstepped their bounds and produced confusion and contradiction **The Marxist Theory of Schooling**

Michael R. Matthews, 1980 *Journal of the History of Philosophy*, 1991 **Philosophy & Methodology of the Social Sciences: Scientific knowledge as a social product** Mark J. Smith, 2005 Covers the traditional literature on the philosophy of the social sciences and the contemporary philosophical and methodological debates developing at the heart of the disciplinary and interdisciplinary groups in the social sciences It addresses the needs of researchers and academics who are grappling with the relationship between questions of knowledge construction and the problems of social scientific method *Invisible Leviathan* Murray E. G. Smith, 1994 The text is broad ranging integrating eleven studies that consider the theory of labour value from historical philosophical and economic perspectives Smith incorporates a thorough review of the controversy that has raged around Marx's theory of labour value reporting the key arguments of orthodox Marxists neo Ricardians neo orthodox Marxists and fundamentalist Marxists He concludes that the Marxian theory of labour value remains a logically coherent and theoretically sound basis for understanding capitalism's historical structural crises Also included is a reconsideration of Marx's law of the falling tendency of the rate of profit along with a statistical analysis of long term trends in the Canadian economy that lend support to Marx's views **Hegel and Marx** Ian Fraser, 1998 This text introduces the

concept of need as viewed by Hegel and Marx and places it within the context of modern need theories and theorists The book works through key texts including Hegel's Philosophy of Right and Marx's Capital and discusses the theory in relation to Soviet Communism and social democracy Covers key texts by Hegel and Marx studied by undergraduates on political theory courses Looks at political implications for modern need theory Accessible author makes good use of textual evidence

Need theory is a major element of modern social theory      *National Association of Corporation Training. Bulletin* ,1923
