Mercury Contaminated Sites:

Mercury Contaminated Sites Ralf Ebinghaus, Ralph R. Turner, Luiz D. de Lacerda, O. Vasiliev, Wim Salomons, 2013-11-11 Mercury is outstanding among the global environmental pollutants of continuing th concern Especially in the last decade of the 20 century environmental scientists legislators politicians and the public have become more aware of mercury pollu tion in the global environment It has often been suggested that anthropogenic emissions are leading to a general increase in mercury on local regional and glo bal scales Numerous industrial activities including the mining of gold silver and mercury itself have caused mercury contamination of terrestrial and aquatic eco systems Mercury contaminated sites are abundant worldwide Mercury has been accumulated as an industrial legacy in the rocks soils and sediments at and adjacent to industrial sites and now may pose significant risks to human and eco logical health Direct inputs of mercury into the environment by industrial activi ties have generally decreased significantly in the Western world over the past three decades However sources such as coal combustion and the use of mercury in gold and silver mining continue to be of importance on a global scale The same is true for diffuse sources such as terrestrial landscapes that have been impacted by mer cury inputs from the atmosphere in the past Soils and vegetation located close to large atmospheric mercury sources have clearly been sinks while these sources were active in the past In the long run however these soils may have become important diffuse area sources after the original emissions were discontinued *Mercury Contaminated Sites* Berdj Kenadjian, 2005-11 From Darkness to Light is the true story of how two little known men guided by unseen celestial forces confronted and overcame overwhelming obstacles to create a new understanding of the root causes of world disorder and its bitter fruit of widespread anxiety **Bioremediation of Mercury-contaminated Sites**, 1994 International Workshop on Mercury in Contaminated Sites: Characterization , Impacts and Remediation, 10-14 October, 2010, Piran, Slovenia International Workshop on Mercury in contaminated sites: characterization , impacts and remediation, 2013 Alternative Field Methods to Treat Mercury in Soil , 2002 The Department of Energy DOE currently has mercury Hg contaminated materials and soils at the various sites Figure 1 1 from <http://www.ct.ornl.gov/stcg/hg> shows the estimated distribution of mercury contaminated waste at the various DOE sites Oak Ridge and Idaho sites have the largest deposits of contaminated materials The majorities of these contaminated materials are soils sludges debris and waste waters This project concerns treatment of mercury contaminated soils The technology is applicable to many DOE sites in particular the Y 12 National Security Complex in Oak Ridge Tennessee and Idaho National Engineering and Environmental Laboratory INEEL These sites have the majority of the soils and sediments contaminated with mercury The soils may also be contaminated with other hazardous metals and radionuclides At the Y12 plant the baseline treatment method for mercury contaminated soil is low temperature thermal desorption LTTD followed by on site landfill disposal LTTD is relatively expensive estimated cost of treatment which exclude disposal cost for the collect mercury is greater than 740 per cubic yard cy at Y 12 does not treat any

of the metal or radionuclides DOE is seeking a less costly alternative to the baseline technology As described in the solicitation DE RA 01NT41030 this project initially focused on evaluating cost effective in situ alternatives to stabilize or remove the mercury Hg contamination from high clay content soil It was believed that ex situ treatment of soil contaminated with significant quantities of free liquid mercury might pose challenges during excavation and handling Such challenges may include controlling potential mercury vapors and containing liquid mercury beads As described below the focus of this project was expanded to include consideration of ex situ treatment after award of the contract to International Technology Corporation IT After award of the contract IT became part of Shaw E I The company will be denoted as IT for the rest of the document since the original contract was awarded to IT This report details IT Knoxville TN and its subcontractor Nuclear Fuels Services NFS study to investigate alternative mercury treatment technology The IT NFS team demonstrated two processes for the amalgamation stabilization fixation of mercury and potentially Resource Conservation Recovery Act RCRA and radionuclide contaminated soils This project was to identify and demonstrate remedial methods to clean up mercury contaminated soil using established treatment chemistries on soil from the Oak Ridge Reservation Y 12 National Security Complex the off site David Witherspoon properties and or other similarly contaminated sites Soil from the basement of Y 12 Plant Alpha 2 Building at the Oak Ridge Reservation was received at IT and NFS on December 20 2001 Soils from the other locations were not investigated The soil had background levels of radioactivity and had all eight RCRA metals well below the Toxicity Characteristic TC criteria This project addresses the new DOE Environmental Management Thrust 2 Alternative Approaches to Current High Risk High Cost Baselines Successful completion of this project will provide a step change in DOE s treatment ability

Special Issue: Mercury in Contaminated Sites: Identification, Characterization, Remediation, Impact ,2013 Mercury and Arsenic Wastes ,1993 *Toxicological Profile for Mercury* Clement Associates,1989

Effective Use of Risk Assessments and the Public Comment Process to Achieve Acceptable Remediation Goals for Mercury-contaminated Sites ,1996 As a result of recalculating risk levels using new information the remediation goals and cleanup strategy for the Lower East Fork Poplar Creek floodplains have been significantly changed to reflect an important reduction in cleanup costs while ensuring protection of human health and the environment This project and its stakeholders have made the risk assessment more effective by better defining the contaminant and adjusting assessment parameters As a result the remediation goal initially set at 50 ppM Hg has been changed to 400 ppM resulting in significant reductions in both the destruction of the floodplain landscape and project costs Volume of soils to be excavated has been decreased from 1 million cubic yards to 25 000 cubic yards and the cost has been reduced from about 1 billion to less than 20 million The Record of Decision for Lower East Fork Poplar Creek was approved in August 1995

Contaminated Soil '90 F. Arendt, M. Hinsenveld, W. J. van den Brink, 1990 **The Use of Haz-Flote to Efficiently Remove Mercury from Contaminated Materials** ,2009 There are thousands of known contaminated sites in the United States including Superfund

sites 1500 to 2100 sites RCRA corrective action sites 1500 to 3500 sites underground storage tanks 295 000 sites U S Department of Defense sites 7300 sites U S Department of Energy sites 4 000 sites mining refuse piles and numerous other hazardous metals and organic contamination sites Only a small percentage of these sites has been cleaned up The development of innovative technologies to handle the various clean up problems on a national and international scale is commonplace Many innovative technologies have been developed that can be used to effectively remediate contaminated materials Unfortunately many of these technologies are only effective for materials coarser than approximately 200 mesh In addition these technologies usually require considerable investment in equipment and the clean up costs of soil material are relatively high in excess of 100 to 500 per yd³ These costs result from the elaborate nature of the processes the costs for power and the chemical cost The fine materials are disposed of or treated at considerable costs As a result the costs often associated with amelioration of contaminated sites are high Western Research institute is in the process of developing an innovative soil washing technology that addresses the removal of contaminants from the fine size fraction materials located at many of the contaminated sites This technology has numerous advantages over the other ex situ soil washing techniques It requires a low capital investment low operating costs and results in high levels of re emplacement of the cleaned material on site The process has the capability to clean the fine fraction

An Evaluation of Mercury Contaminaton at the Fundy National Park Golf Course André D'Entremont, Jennifer A. Carter, Parks Canada. Atlantic Region, 1996 At the Fundy National Park golf course fungicides containing mercury were applied to greens between 1949 and 1983 and mercury contamination still persists on the course This report summarizes three 1995 studies to provide an assessment of that contamination An Environment Canada study documented potential environmental contamination from the use of mercury based fungicides on golf course greens in Atlantic Canada Another study by GEMTEC provided a more detailed valuation of the magnitude and distribution of mercury contamination at the Fundy National Park course by analyzing samples of soil water grass and sediment The third study involved a human health risk assessment using data from the GEMTEC study and results from air samples collected on a hot summer day Methodology employed included hazard identification toxicity assessment and risk characterization

Sources, Transport, and Fate of Mercury in San Francisco Estuary and Tributaries Christopher Hughes Conaway, 2005

Interim action work plan , 2016 The goal of this interim action is removal and off site disposal of the estimated 600 cubic yards of mercury contaminated soil at the former Cell Building To address hazardous waste landfill disposal requirements the soil will first be treated on site to meet federal land disposal restriction treatment standards

Proceedings of the Aquatic Toxicity Workshop , 1997 **Site Remediation Program Site Status Report** , 1992

Authors Website Occasionally, authors provide excerpts or short stories for free on their websites. While this might not be the Mercury Contaminated Sites full book , it can give you a taste of the authors writing style. Subscription Services Platforms like Kindle Unlimited or Scribd offer subscription-based access to a wide range of Mercury Contaminated Sites eBooks, including some popular titles.

FAQs About Mercury Contaminated Sites Books

What is a Mercury Contaminated Sites PDF? A PDF (Portable Document Format) is a file format developed by Adobe that preserves the layout and formatting of a document, regardless of the software, hardware, or operating system used to view or print it. **How do I create a Mercury Contaminated Sites PDF?** There are several ways to create a PDF: Use software like Adobe Acrobat, Microsoft Word, or Google Docs, which often have built-in PDF creation tools. Print to PDF: Many applications and operating systems have a "Print to PDF" option that allows you to save a document as a PDF file instead of printing it on paper. Online converters: There are various online tools that can convert different file types to PDF. **How do I edit a Mercury Contaminated Sites PDF?** Editing a PDF can be done with software like Adobe Acrobat, which allows direct editing of text, images, and other elements within the PDF. Some free tools, like PDFescape or Smallpdf, also offer basic editing capabilities. **How do I convert a Mercury Contaminated Sites PDF to another file format?** There are multiple ways to convert a PDF to another format: Use online converters like Smallpdf, Zamzar, or Adobe Acrobats export feature to convert PDFs to formats like Word, Excel, JPEG, etc. Software like Adobe Acrobat, Microsoft Word, or other PDF editors may have options to export or save PDFs in different formats. **How do I password-protect a Mercury Contaminated Sites PDF?** Most PDF editing software allows you to add password protection. In Adobe Acrobat, for instance, you can go to "File" -> "Properties" -> "Security" to set a password to restrict access or editing capabilities. Are there any free alternatives to Adobe Acrobat for working with PDFs? Yes, there are many free alternatives for working with PDFs, such as: LibreOffice: Offers PDF editing features. PDFsam: Allows splitting, merging, and editing PDFs. Foxit Reader: Provides basic PDF viewing and editing capabilities. How do I compress a PDF file? You can use online tools like Smallpdf, ILovePDF, or desktop software like Adobe Acrobat to compress PDF files without significant quality loss. Compression reduces the file size, making it easier to share and download. Can I fill out forms in a PDF file? Yes, most PDF viewers/editors like Adobe Acrobat, Preview (on Mac), or various online tools allow you to fill out forms in PDF files by selecting text fields and entering information. Are there any restrictions when working with PDFs? Some PDFs might have restrictions set by their creator, such as password protection, editing restrictions, or print restrictions. Breaking these restrictions might require specific software or tools, which may or may not be legal depending on the circumstances and local laws.
