Enfoldment and Infinity Laura U. Marks,2010-08-13 Tracing the connections both visual and philosophical between new media art and classical Islamic art In both classical Islamic art and contemporary new media art one point can unfold to reveal an entire

universe A fourteenth century dome decorated with geometric complexity and a new media work that shapes a dome from programmed beams of light both can inspire feelings of immersion and transcendence In Enfoldment and Infinity Laura Marks traces the strong similarities visual and philosophical between these two kinds of art Her argument is more than metaphorical she shows that the Islamic quality of modern and new media art is a latent deeply enfolded historical inheritance from Islamic art and thought Marks proposes an aesthetics of unfolding and enfolding in which image information and the infinite interact image is an interface to information and information such as computer code or the words of the Qur an is an interface to the infinite After demonstrating historically how Islamic aesthetics traveled into Western art Marks draws explicit parallels between works of classical Islamic art and new media art describing texts that burst into image lines that multiply to form fractal spaces nonorganic life in carpets and algorithms and other shared concepts and images Islamic philosophy she suggests can offer fruitful ways of understanding contemporary art

This new edition expands the original to include more in-depth coverage of contemporary art. Newly updated bibliography and suggestions for further reading. Six chapters covering the major periods of Western art history: Antiquity and the Middle Ages; the early modern period; Renaissance and Baroque; the Enlightenment; the nineteenth century; early twentieth century modernism; and postmodernism. The book maps the anomalies of network culture from the angles of security concerns; the biopolitics of digital systems; and the aspirations for artificial life in software. The genealogy of network culture is approached from the standpoint of accidents that are endemic to the digital media ecology. Viruses, worms and other software objects are not then seen merely from the perspective of anti-virus research or practical security concerns but as cultural and historical expressions that traverse a non-linear field from fiction to technical media from net art to politics of software. Jussi Parikka mobilizes an extensive array of source materials and intertwines them with an inventive new materialist cultural analysis. Digital Contagions draws from the cultural theories of Gilles Deleuze and Félix Guattari; Friedrich Kittler and Paul Virilio among others and offers novel insights into historical media analysis.
