**Metal Nitrosyls** George B. Richter-Addo, Peter Legzdins, 1992 This book covers all aspects of metal nitric oxide chemistry Topics range from descriptions of the metal NO bond to their chemical reactions and environmental significance Treated in detail are coordination and organometallic nitrosyl complexes interactions of nitric oxide with surfaces metal nitrosyl clusters and the biosynthesis biotransformation and bioinorganic chemistry of nitric oxide The book includes an examination of all known classes of reactions of metal nitrosyls The roles of nitric and nitrous oxides in environmental chemistry are outlined in the closing chapter This book will be of interest to students and researchers in the fields of inorganic organometallic and bioinorganic chemistry Nitrosyl Complexes in Inorganic Chemistry, Biochemistry and Medicine I D. Michael P. Mingos, 2014-06-05 The series Structure and Bonding publishes critical reviews on topics of research concerned with chemical structure and bonding The scope of the series spans the entire Periodic Table and addresses structure and bonding issues associated with all of the elements It also focuses attention on new and developing areas of modern structural and theoretical chemistry such as nanostructures molecular electronics designed molecular solids surfaces metal clusters and supramolecular structures Physical and spectroscopic techniques used to determine examine and model structures fall within the purview of Structure and Bonding to the extent that the focus is on the scientific results obtained and not on specialist information concerning the techniques themselves Issues associated with the development of bonding models and generalizations that illuminate the reactivity pathways and rates of chemical processes are also relevant The individual volumes in the series are thematic The goal of each volume is to give the reader whether at a university or in industry a comprehensive overview of an area where new insights are emerging that are of interest to a larger scientific audience Thus each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole The most significant developments of the last 5 to 10 years should be presented using selected examples to illustrate the principles discussed A description of the physical basis of the experimental techniques that have been used to provide the primary data may also be appropriate if it has not been covered in detail elsewhere The coverage need not be exhaustive in data but should rather be conceptual concentrating on the new principles being developed that will allow the reader who is not a specialist in the area covered to understand the data presented Discussion of possible future research directions in the area is welcomed Review articles for the individual volumes are invited by the volume editors Readership research scientists at universities or in industry graduate students Special offer For all customers who have a standing order to the print version of Structure and Bonding we offer free access to the electronic volumes of the Series published in the current year via SpringerLink Bioinorganic Chemistry Ram Charitra Maurya, 2021-09-07 The book includes several topics as per Universities curriculum of M Sc and M Phil course work in Chemistry This covers different Physiological aspects of Bioinorganic Chemistry in terms of 4 Chapters with in depth and up to date coverage The book symmetrically presents i

Coordination chemistry of chlorophylls bacteriochlorophylls and its functional aspects in photosynthesis ii Complexes containing nitric oxide Synthesis reactivity structure bonding and therapeutic aspects of nitric oxide releasing molecules NORMS in human beings and plants iv Complexes containing carbon monoxide Synthesis reactivity structure bonding and therapeutic aspects of carbon monoxide releasing molecules CORMS in human beings and plants and iv Advantageous role of gaseous signaling molecule H<sub>2</sub>S Hydrogen sulphide and their respective donors in ophthalmic diseases and physiological implications in plants At the end three relevant topics are included as appendices for updating students and faculty members

*Nitric Oxide* Louis J. Ignarro, 2000-09-13 Nitric oxide NO is a gas that transmits signals in an organism Signal transmission by a gas that is produced by one cell and which penetrates through membranes and regulates the function of another cell represents an entirely new principle for signaling in biological systems NO is a signal molecule of key importance for the cardiovascular system acting as a regulator of blood pressure and as a gatekeeper of blood flow to different organs NO also exerts a series of other functions such as acting a signal molecule in the nervous system and as a weapon against infections NO is present in most living creatures and made by many different types of cells NO research has led to new treatments for treating heart as well as lung diseases shock and impotence Scientists are currently testing whether NO can be used to stop the growth of cancerous tumors since the gas can induce programmed cell death apoptosis This book is the first comprehensive text on nitric oxide to cover all aspects basic biology chemistry pathobiology effects on various disease states and therapeutic implications Edited by Nobel Laureate Louis J Ignarro editor of the Academic Press journal Nitric Oxide Authored by world experts on nitric oxide Includes an overview of basic principles of biology and chemical biology Covers principles of pathobiology including the nervous system cardiovascular function pulmonary function and immune defense
