Oxidative Stress And Cardiac Failure:

Oxidative Stress and Cardiac Failure Marrick Kukin, Valentin Fuster, 2002-10-22 Far from being a direct complication of primary damage to heart muscle it is now recognised that the pathogenesis of heart failure may rely on a combination of neurohormonal cellular and molecular factors An overwhelming number of systems appear to be activated in heart failure and contribute in some way towards structural remodelling Comprising a comprehensive evaluation of the experimental and clinical data relating oxidative stress and heart failure this text proposes that oxidative stress may be the common pathway for muscle dysfunction cellular growth and remodelling and myocyte death Acknowledged experts in the field here present a persuasive argument for raising the profile of oxidative stress as an important perhaps critical contributor to the adverse consequences of heart failure This volume should serve as a rich source of supportive data for clinicians and investigators interested in the pathophysiology and treatment of heart failure and as a platform on which to base further research

Modulation of Oxidative Stress in Heart Disease Sajal Chakraborti, Naranjan S. Dhalla, Madhu Dikshit, Nirmal K. Ganguly, 2019-11-10 This book highlights the multifaceted roles of Reactive Oxygen Species ROS in modulating normal cellular and molecular mechanisms during the development of different types of heart disease Each chapter in the book deals with the role that altered redox homeostasis plays in the pathophysiology of heart disease In addition the book explains how reactive oxidant species interact with their targets and provides novel strategies for attenuating oxidative stress induced types of heart disease The book not only covers ROS induced response in heart disease at the cellular level but also demonstrates that an imbalance of redox states has its roots in our genes and explains the ways gene expression is regulated In turn it reviews potential sources of ROS their pathological effects on the heart and potential sites for therapeutic interventions

Oxidative Stress in Heart Diseases Sajal Chakraborti, Naranjan S. Dhalla, Nirmal K. Ganguly, Madhu Dikshit, 2019-11-06 This book bridges the gap between fundamental and translational research in the area of heart disease It describes a multidisciplinary approach and demonstrates biochemical mechanisms associated with dysregulation of redox signaling which leads heart disease Presenting recent studies on improved forms of ROS scavenging enzymes specific inhibitors for different ROS generating enzymes and oxidant induced signaling pathways and their antagonists that allow subtle modulation of redox signaling it also discusses the spatial and temporal aspects of oxidative stress in the cardiovascular system which are of vital importance in developing better strategies for treating heart disease Each chapter offers researchers valuable insights into identifying targets for drug development for different types of heart disease

Role of Oxidative Stress in Heart Failure Subsequent to Myocardial Infarction Michael F. Hill, 1998

Antioxidants and Cardiovascular Disease Jean-Claude Tardif, Martial G. Bourassa, 2000 This work addresses a complex problem in cardiovascular medicine It is written by experts in the fields of atherosclerosis heart failure and antioxidants It should be of interest not only to academicians but also to practising physicians including postdoctoral fellows internists

cardiologists and general practitioners The first three chapters review the antioxidant hypothesis and its close relationship to lipid mechanisms of action and classify the different and heterogeneous pharmacological compounds with known antioxidant properties and describe the role of dietary nutrients and supplements as well as the potential therapeutic benefit of antioxidants in coronary artery disease prevention and risk reduction prevention of endothelial dysfunction and prevention of chronic heart failure Finally current knowledge of the use of these compounds in cardiovascular medicine is summarized

Molecular Approaches to Heart Failure Therapy Gerd Hasenfuss,2000 This book provides an approach to discussing new targets for molecular strategies in heart failure therapy On the basis of most recent data international experts in this field elaborate on the most relevant pathophysiological alterations in heart failure on a molecular level and discuss potential strategies These include technical aspects of gene transfer gene transfer approaches to treating pump failure and arrhythmias and gene transfer to prevent apoptosis Furthermore the topics myocyte transplantation and cell cycle regulation are discussed The book contains twenty one chapters including state of the art review articles as well as original papers

Reactive Oxygen Species and the Cardiovascular System Augusto Montezano,Rhian Touyz,2012-01-12 Reactive oxygen species ROS influence various physiological processes including host defense hormone biosynthesis and cellular signaling Increased ROS production oxidative stress is implicated in many diseases of the cardiovascular system including hypertension atherosclerosis cardiac failure stroke diabetes and kidney disease ROS are produced throughout the cardiovascular system in the kidney and central and peripheral nervous system A major source for cardiovascular renal and neural ROS is a family of non phagocytic NAD P H oxidases including the prototypic Nox2 homologue based NAD P H oxidase as well as other NAD P H oxidases such as Nox1 and Nox4 Other possible sources include mitochondrial electron transport enzymes xanthine oxidase cyclooxygenase lipoxygenase and uncoupled nitric oxide synthase NOS NAD P H oxidase derived ROS is important in regulating endothelial function and vascular tone and oxidative stress is implicated in endothelial dysfunction inflammation hypertrophy apoptosis migration fibrosis angiogenesis and rarefaction important processes involved in vascular remodeling in cardiovascular disease These findings have evoked considerable interest because of the possibilities that therapies targeted against non phagocytic NAD P H oxidase to decrease ROS generation and or strategies to increase nitric oxide NO availability and antioxidants may be useful in minimizing vascular

Cardiovascular-Metabolic Diseases Ali Hussein Eid,Firas Kobeissy,Ahmed F. El-Yazbi,2024-08-07 The book dissects the role of oxidative stress in the pathogenesis of the leading causes of global morbidity and mortality i e cardiovascular and metabolic diseases The chapters discuss topics related to the role reactive oxygen species ROS play in hypertension atherosclerosis diabetes obesity and related pathologies One chapter discusses the clinical efficacy and safety considerations of GLP 1 receptor agonists and SGLT 2 inhibitors in obesity management and the associated cardiovascular complications Another chapter discusses the context dependent roles of matrix metalloproteases and how their activity can be modulated and utilized for the development of improved drugs for cardiometabolic diseases Moreover how ROS and aging interplay to precipitate cardiovasculo metabolic disease is discussed and highlighted Similarly how sex and sepsis interplay in the context of cardiorenal disease is teased out in one of the chapters Preventive measures that can abrogate ROS induced cardiovasculo metabolic disease are discussed and clarified in the hope of reducing such a debilitating battery of diseases Another chapter is fully dedicated to the roles of ROS in atherosclerosis while another chapter deals with mechanisms and effect of ROS on various phenotypes of adipose tissues in the context of cardiovasculo metabolic disease A chapter also discusses the link between traumatic brain injury TBI and cardiovascular impairments and how ROS plays a significant role in TBI induced cardiovascular disease A section dedicated to antioxidants as potential therapy is also included Given the complexity of the mechanisms implicated in ROS modulated responses it remains challenging to assert a conclusive argument and pre determined regimen for incorporating antioxidants into conventional therapies In all of the chapters the molecular cellular genetic and pharmacological mechanisms implicated are covered from an applied science perspective This is an ideal book for basic researchers in the biomedical field graduate students in biological and biomedical fields medical students instructors in medical and graduate schools and professionals working for pharmaceutical companies Advances in Heart Failure Asher Kimchi,2002 Oxidative Stress and Xanthine Oxidase in Acute and Chronic Cardiac Volume Overload in Rats James D. and there is no medical therapy Cardiac VO is marked by eccentric remodeling and contractile dysfunction ultimately resulting in cardiac failure Oxidative stress is implicated in the pathophysiology of heart failure and recent evidence suggests xanthine oxidase XO plays a role in VO To study VO we used a rat model of aortocaval fistula ACF ACF results in early diastolic stress on the left ventricle LV and recapitulates the progressive nature of heart failure with contractile function being initially maintained and then depressed by 6 weeks To determine the role of XO in the setting of VO we utilized an established XO inhibitor allopurinol in the ACF animal model The following questions have been addressed in this dissertation 1 What are the early events in VO that set forth a cycle of progressive remodeling and dysfunction 2 Does XO play a role in these events 3 Is XO a valid therapeutic target in cardiac VO both in the acute and chronic setting In testing these concepts we have used a combined in vivo and in vitro approach to determine the cardiac response to VO with end points including cardiac function cardiac remodeling bioenergetics and cardiac efficiency Our data support a causative role for XO in both the acute phase of VO and in the transition to cardiac failure These findings establish an interplay between XO activation and bioenergetic dysfunction that may provide a new therapeutic target to prevent progression to heart failure in VO *Goodman & Gilman's The Pharmacological Basis of Therapeutics, Eleventh Edition* Laurence Brunton, John Lazo, Keith Parker, 2005-09-13 The undisputed leader in medical pharmacology without equal Updated to reflect all critical new developments in drug action and drug disease interaction This is the desert island book of all medical pharmacology if you can own just one pharmacology book this is it
