Metamathematics of First-Order Arithmetic Petr Hájek, Pavel Pudlák, 2017-03-02 Since their inception the Perspectives in Logic and Lecture Notes in Logic series have published seminal works by leading logicians. Many of the original books in the series have been unavailable for years but they are now in print once again. This volume, the third publication in the Perspectives in Logic series, is a much needed monograph on the metamathematics of first order arithmetic. The authors pay particular attention to subsystems, fragments of Peano arithmetic and give the reader a deeper understanding of the role of the axiom schema of induction and of the phenomenon of incompleteness. The reader is only assumed to know the basics of mathematical logic which are reviewed in the preliminaries. Part I develops parts of mathematics and logic in various fragments. Part II is devoted to incompleteness. Finally, Part III studies systems that have the induction schema restricted to bounded formulas of bounded arithmetic.

[Q-Bibliography of Mathematical Logic](#) Heinz-Dieter Ebbinghaus, 2013-06-29 Gert H. Müller The growth of the number of publications in almost all scientific areas as in the area of mathematical logic is taken as a sign of our scientifically minded culture but it also has a terrifying aspect. In addition given the rapidly growing sophistication of specialization and hence subdivision of logic researchers, students and teachers may have a hard time getting an overview of the existing literature, particularly if they do not have an extensive library available in their neighbourhood. They simply do not even know what to ask for. More specifically if someone vaguely knows that something vaguely connected with his interests exists somewhere in the literature he may not be able to find it even by searching through the publications scattered in the review journals. Answering this challenge was and is the central motivation for compiling this Bibliography. The Bibliography comprises presently the following six volumes listed with the corresponding Editors:

- I Classical Logic W. Rautenberg
- II Non classical Logics W. Rautenberg
- III Model Theory H. D. Ebbinghaus
- IV Recursion Theory P. G. Hinman
- V Set Theory A. R. Blass
- VI Proof Theory Constructive Mathematics J. E. Kister, D. van Dalen, A. S. Troelstra

[Wind Power for the World](#) Preben Maegaard, Anna Krenz, Wolfgang Palz, 2016-04-19 In part 2 of Wind Power for the World the editors have collected reports and overviews of wind power status and history in various countries, several written by individuals who have made valuable contributions to the successful emergence of wind power. The chapters cover the uphill struggle, wind energy strategies and policies that paved the way and the creative persons in politics, agencies, institutes and the industry. It also examines the world societies at large and how solutions to the challenges were found in different countries.
