Modeling in Computer Graphics Bianca Falcidieno,Tosiyasu L. Fomenko,Tosiyasu L. Kunii,2013-04-17 The flood of information through various computer networks such as the In ternet characterizes the world situation in which we live Information worlds often called virtual spaces and cyberspaces have been formed on computer networks The complexity of information worlds has been increasing almost exponentially through the exponential growth of computer networks Such

nonlinearity in growth and in scope characterizes information worlds In other words the characterization of nonlinearity is the key to understanding utilizing and living with the flood of information The characterization approach is by characteristic points such as peaks pits and passes according to the Morse theory Another approach is by singularity signs such as folds and cusps Atoms and molecules are the other fundamental characterization approach Topology and geometry including differential topology serve as the framework for the characterization Topological Modeling for Visualization is a textbook for those interested in this characterization to understand what it is and how to do it Understanding is the key to utilizing information worlds and to living with the changes in the real world Writing this textbook required careful preparation by the authors There are complex mathematical concepts that require designing a writing style that facilitates understanding and appeals to the reader To evolve a style we set as a main goal of this book the establishment of a link between the theoretical aspects of modern geometry and topology on the one hand and experimental computer geometry on the other

Virtual Clothing

Pascal Volino,Nadia Magnenat-Thalmann,2012-12-06 In this book we investigate the problem of simulating clothes and clothing A range of topics are addressed from shape modeling of a piece of cloth to the realistic garments on virtual humans Different situations demand different properties a cloth Existing solutions though useful for many applications reveal that further improvements are required Cloth modeling has been a topic of research in the textile mechanics and engineering communities for a very long time However in the mid 1980s researchers in computer graphics also became interested in modeling cloth in order to include it in the 3D computer generated images and films The evolution of cloth modeling and garment simulation in computer graphics indicates that it has grown from basic shape modeling to the modeling of its complex physics and behaviors Chapter 2 provides a summary of the different methods developed in computer graphics over the last 15 to 20 years In computer graphics only the macroscopic properties of the cloth surface are considered Physical accuracy is given less importance in comparison to the visual realism However a trend of employing a multi disciplinary approach has started and the community of textile engineering and computer graphics have begun to combine their expertise to come up with solutions that can satisfy that of both communities
