Modelling In Geography:

Agent-Based Modelling and Geographical Information Systems Andrew Crooks, Nicolas Malleon, Ed Manley, Alison Heppenstall, 2018-12-13 This is the era of Big Data and computational social science It is an era that requires tools which can do more than visualise data but also model the complex relation between data and human action and interaction Agent Based Models ABM computational models which simulate human action and interaction do just that This textbook explains how to design and build ABM and how to link the models to Geographical Information Systems It guides you from the basics through to constructing more complex models which work with data and human behaviour in a spatial context All of the fundamental concepts are explained and related to practical examples to facilitate learning with models developed in NetLogo with all code examples available on the accompanying website You will be able to use these models to develop your own applications and link where appropriate to Geographical Information Systems All of the key ideas and methods are explained in detail geographical modelling an introduction to ABM the fundamentals of Geographical Information Science why ABM and GIS using QGIS designing and building an ABM calibration and validation modelling human behavior An applied primer that provides fundamental knowledge and practical skills it will provide you with the skills to build and run your own models and to begin your own research projects

Modelling Geographical Systems B. Boots, A. Okabe, R. Thomas, 2013-11-11 Within the realm of quantitative geography systems modelling is specifically concerned with understanding those relationships that influence the attributes of phenomena located in space and time The intention is to replicate the main processes influencing a system's behaviour and thereby assist its management through a capability to estimate future change Over the last few decades one of the major institutional initiatives for promoting such research has been provided by specialised Study Groups and Commissions established by the International Geographical Union IGU These scholarly networks have aimed to coordinate international research agendas for geographical systems modelling and their activities have been recorded in both edited volumes Fischer and Getis 1997 and special issues of learned journals Wilkinson and Boots 2000 Leung and Okabe 2001 Presently this facilitative task is the charge of the Commission on Modelling Geographical Systems CMGS appointed at the IGU Hague Congress in 1996 and chaired by Barry Boots 1996 2000 and Richard Thomas 2000 present Set against this background this book provides a perspective on the work of the CMGS from 1996 until the IGU Seoul Congress in August 2000 through a collection of papers first presented to our sessions at this event Moreover a number of Japanese delegates were attracted to this Asian venue and their contributions provide many new ideas concerning the implementation of systems analysis

Modelling Scale in Geographical Information Science Nicholas Tate, Peter M. Atkinson, 2001-12-05 Scale has long been a fundamental concept in geography Its importance is emphasised in geographical information science GIScience where the computational domain necessitates the rigorous definition and handling of scale Geographical information systems are now used in almost

every walk of life but scale is often handled poorly in such systems Modelling Scale in Geographical Information Science is written by an international team of contributors drawn from both industry and academia and considers models and methods of scaling spatial data in both human and physical systems Divided into three sections to give a balanced coverage of the key problems tools and models associated with scale Fractal Models The Modifiable Areal Unit Problem Changing the Scale of Measurement This book is an essential read for all GIScience researchers advanced students and practitioners who want to delve more deeply into the scale issues of the spatial data and spatial models that form the basis of their analyses
