**Constructive Neural Networks** Leonardo Franco, José M. Jerez, 2009-10-27 This book presents a collection of invited works that consider constructive methods for neural networks taken primarily from papers presented at a special session held during the 18 International Conference on Artificial Neural Networks ICANN 2008 in September 2008 in Prague Czech Republic The book is devoted to constructive neural networks and other incremental learning algorithms that constitute an alternative to the standard method of finding a correct neural architecture by trial and error These algorithms provide an incremental way of building neural networks with reduced topologies for classification problems Furthermore these techniques produce not only the multilayer topologies but the value of the connecting synaptic weights that are determined automatically by the constructing algorithm avoiding the risk of becoming trapped in local minima as might occur when using gradient descent algorithms such as the popular back propagation In most cases the convergence of the constructing algorithms is guaranteed by the method used Constructive methods for building neural networks can potentially create more compact and robust models which are easily implemented in hardware and used for embedded systems Thus a growing amount of current research in neural networks is oriented towards this important topic The purpose of this book is to gather together some of the leading investigators and research groups in this growing area and to provide an overview of the most recent advances in the techniques being developed for constructive neural networks and their applications Evolutionary Algorithms for Solving Multi-Objective Problems Carlos Coello Coello, Gary B. Lamont, David A. van Veldhuizen, 2007-08-26 Solving multi objective problems is an evolving effort and computer science and other related disciplines have given rise to many powerful deterministic and stochastic techniques for addressing these large dimensional optimization problems Evolutionary algorithms are one such generic stochastic approach that has proven to be successful and widely applicable in solving both single objective and multi objective problems This textbook is a second edition of Evolutionary Algorithms for Solving Multi Objective Problems significantly expanded and adapted for the classroom The various features of multi objective evolutionary algorithms are presented here in an innovative and student friendly fashion incorporating state of the art research The book disseminates the application of evolutionary algorithm techniques to a variety of practical problems including test suites with associated performance based on a variety of appropriate metrics as well as serial and parallel algorithm implementations Control and Intelligent Systems, 1998 **Advances in Service and Industrial Robotics** Andreas Müller, Mathias Brandstötter, 2022-04-22 This book presents the proceedings of the 31st International Conference on Robotics in Alpine Danube Region RAAD held in Klagenfurt Austria June 8 10 2022 It gathers contributions by researchers from several countries on all major areas of robotic research development and innovation as well as new applications and current trends The topics covered include novel designs and applications of robotic systems intelligent cooperating and service robots advanced robot control human robot interfaces robot vision systems mobile robots humanoid

and walking robots bio inspired and swarm robotic systems aerial underwater and spatial robots robots for ambient assisted living medical robots and bionic prostheses cognitive robots cloud robotics ethical and social issues in robotics etc Given its scope the book offers a source of information and inspiration for researchers seeking to improve their work and gather new ideas for future developments Chapter The Use of Robots in Aquatic Biomonitoring with Special Focus on Biohybrid Entities is available open access under a Creative Commons Attribution 4.0 International License via link [springer.com](https://www.springer.com)

*Proceedings of the 4th Asia Pacific Conference on Computer Human Interaction (APCHI 2000) and 6th S.E. Asian Ergonomics Society Conference (ASEAN Ergonomics 2000)* K.Y. Lim, 2000-11-16 In the next millennium it is anticipated that

human factors issues will take centre stage in initiatives targeted at enhancing economic competitiveness and productivity. This development is already discernible in nascent knowledge and digital based industries and economies which are expected to emerge in force in the near future and continue to dominate thereafter. These developments will establish irreversibly the emerging global economy. The theme of the APCHI 2000 conference is Towards a seamless integration of collaborative human computer systems to reflect the already discernible shift in focus of human computer interaction HCI whilst the theme of the ASEAN Ergonomics 2000 conference is From user centeredness to people centeredness to reflect the imminent shift in focus that is required of human factors. The papers in these proceedings provide a good contrast of human factors contributions to both old and new economies that make up ASEAN and APEC. They highlight the diverse roles human factors can play in advancing the quality of life in developed developing and third world nations. They also serve as a guide to human factors practitioners in old economies on what to expect as their economies develop.
