Harish, Arun Kumar, 2017-10-01 Green Building Energy Simulation and Modeling presents essential insights into concepts and applications of building energy physics The authors provide a brief but rigorous explanation of various modeling methods for building energy systems order reduction techniques and building energy simulation platforms BESPs that is followed by BES model validation techniques testing and evaluation The book provides designers with the tools and methods they need to validate building energy systems and seize every opportunity to achieve greater energy savings and higher rating scores Provides green building computer code Presents tactics on how to use energy studies and simulation to make informed design decisions Helps readers understand how and when to apply the different types of energy simulation at the appropriate design stage Evaluates passive and active strategies for limiting energy consumption and producing energy onsite **A Hypothetical Enhanced Renewable Energy Utilization (EREU) Model for Electricity Generation in Thailand** Thomas Andexer, 2008-10-29 Master's Thesis from the year 2008 in the subject Environmental Sciences grade Passed Assumption University of Thailand College of Internet Distance Education CIDE School of Business Administration course Master Thesis Project language English abstract This thesis presents a research project entitled A Hypothetical Enhanced Renewable Energy Utilization EREU Model for Electricity Generation in Thailand This research is motivated by Thailand's rapidly increasing electricity consumption caused by the country's long standing above average economic growth Consequently the rising electricity demand can only be satisfied by continuously growing electricity imports and thus creating a significant burden to Thailand's national budget Further more Thailand is heavily dependent on natural gas reserves for electricity generation however these are expected to be depleted within only three decades and global price levels for conventional fuels are increasingly volatile with an ascending tendency as well Therefore Thailand faces an urgent need to strategically plan for the broad utilization of domestic renewable energy resources which is essential for a more diversified and thus sustainable electricity generation as well as for the nation's endeavor to become an energy hub within the South East Asian region Under these circumstances this research conducts a comprehensive literature review regarding the past development as well as the current situation of renewable energy utilization in Thailand which concludes in the identification of the importance of renewable energy in the given context and closes with both a distinctive need assessment and a conceptual framework for Thailand's future renewable energy strategy Subsequently the research introduces a unique primary research endeavor in the form of an explorative expert interview survey which succeeds in a substantial collection of qualitative and in depth data These valuable data is first objectively analyzed and second subjectively interpreted and

summarized to become the major source for the derivation of a multitude of potential strategic recommendations for an enhanced future renewable energy utilization development in Thailand Finally the entirety of theses recommended strategic approaches based on both the secondary and primary research are assembled to develop the Enhanced Renewable Energy Utilization EREU model for electricity generation in Thailand as the fundamental finding of this thesis and research project respectively

Building Energy Modeling with OpenStudio Larry Brackney, Andrew Parker, Daniel Macumber, Kyle Benne, 2018-05-15 This textbook teaches the fundamentals of building energy modeling and analysis using open source example applications built with the US DOE's OpenStudio modeling platform and EnergyPlus simulation engine Designed by researchers at US National Laboratories to support a new generation of high performance buildings EnergyPlus and OpenStudio are revolutionizing how building energy modeling is taught in universities and applied by professional architects and engineers around the world The authors all researchers at National Renewable Energy Laboratory and members of the OpenStudio software development team present modeling concepts using open source software that may be generally applied using a variety of software tools commonly used by design professionals The book also discusses modeling process automation in the context of OpenStudio Measures small self contained scripts that can transform energy models and their data to save time and effort They illustrate key concepts through a sophisticated example problem that evolves in complexity throughout the book The text also examines advanced topics including daylighting parametric analysis uncertainty analysis design optimization and model calibration Building Energy Modeling with OpenStudio teaches students to become sophisticated modelers rather than simply proficient software users It supports undergraduate and graduate building energy courses in Architecture and in Mechanical Civil Architectural and Sustainability Engineering

A Green and Permanent Land Randal S. Beeman, James A. Pritchard, 2001 Once patronized primarily by the counterculture and the health food establishment the organic food industry today is a multi billion dollar business driven by ever growing consumer demand for safe food and greater public awareness of ecological issues Assumed by many to be a recent phenomenon that industry owes much to agricultural innovations that go back to the Dust Bowl era This book explores the roots and branches of alternative agricultural ideas in twentieth century America showing how ecological thought has challenged and changed agricultural theory practice and policy from the 1930s to the present It introduces us to the people and institutions who forged alternatives to industrialized agriculture through a deep concern for the enduring fertility of the soil a passionate commitment to human health and a strong advocacy of economic justice for

farmers Randal Beeman and James Pritchard show that agricultural issues were central to the rise of the environmental movement in the United States As family farms failed during the Depression a new kind of agriculture was championed based on the holistic approach taught by the emerging science of ecology Ecology influenced the permanent agriculture movement that advocated such radical concepts as long term land use planning comprehensive soil conservation and organic farming Then in the 1970s sustainable agriculture combined many of these ideas with new concerns about misguided technology and an over consumptive culture to preach a more sensible approach to farming In chronicling the overlooked history of alternative agriculture A Green and Permanent Land records the significant contributions of individuals like Rex Tugwell Hugh Bennett Louis Bromfield Edward Faulkner Russell and Kate Lord Scott and Helen Nearing Robert Rodale Wes Jackson and groups like Friends of the Land and the Practical Farmers of Iowa And by demonstrating how agriculture also remains central to the public interest especially in the face of climatic crises genetically altered crops and questionable uses of pesticides this book puts these issues in historical perspective and offers readers considerable food for thought
