Advances in Production Management Systems. The Path to Digital Transformation and Innovation of Production Management Systems Bojan Lalic,Vidosav Majstorovic,Ugljesa Marjanovic,Gregor von Cieminski,David Romero,2020-08-25 The two volume set IFIP AICT 591 and 592 constitutes the refereed proceedings of the International IFIP WG 5.7 Conference on Advances in Production Management Systems APMS 2020 held in Novi Sad Serbia in August-September 2020. The 164 papers presented were carefully reviewed and selected from 199 submissions. They discuss globally pressing issues in smart manufacturing, operations management, supply chain management, and Industry 4.0. The papers are organized in the following topical sections: Part I: advanced modelling, simulation, and data analytics in production and supply networks; advanced digital and smart manufacturing; digital and virtual quality management systems; cloud manufacturing; cyber-physical production systems and digital twins; IIOT interoperability; supply chain planning and optimization; digital and smart supply chain management; intelligent logistics networks management; artificial intelligence and blockchain technologies in logistics and DSN; novel production planning and control approaches; machine learning and artificial intelligence connected smart factories of the future; manufacturing systems engineering; agile flexible reconfigurable digital assistance systems; augmented reality and virtual reality; circular products design and engineering; circular green sustainable manufacturing; environmental and social lifecycle assessments; socio-cultural aspects in production systems; data-driven manufacturing and services operations management; product service systems in DSN and collaborative design and engineering. Part II: the Operator 4.0; new physical and cognitive evolutionary paths; digital transformation approaches in production management; digital transformation for more sustainable supply chains; data-driven applications in smart manufacturing and logistics systems; data-driven services characteristics, trends, and applications; the future of lean thinking and practice; digital lean manufacturing and its emerging practices; new reconfigurable flexible or agile production systems in the era of Industry 4.0; operations management in engineer-to-order manufacturing; production management in food supply chains; gastronomic service system design; product and asset life cycle management in the circular economy; and production ramp-up strategies for product. Advances in Production Management Systems Jan Olhager,Fredrik Persson,2007-12-24 The competitive environment is becoming increasingly more complex and intense. In order to cope, business decisions related to various areas tend to become more interrelated. Firms need to couple their operations strategies to the marketing strategies to best support the competition of their products in the marketplace. The perspectives on production management systems are getting more strategic. A more integrated approach is thus called for, bringing together the various perspectives on production management systems and operations strategy. This relationship is important in any type of operation, perhaps more so in supply chains, production networks, and global operations. This book brings together the latest thinking by leading experts, analysts, academics, researchers, and industrial practitioners from around the world who have worked extensively in the area of production

management systems and strategies In the individual chapters of this book authors put forward their perspectives approaches and tools for use in developing and integrating systems and strategies in production management A *Design-Oriented Framework for Modelling Production Management Systems* Philip German Moscoso,2008 Design oriented modelling frameworks are intended to support design practice by helping designers to create models of specific design problems within a class of design problems This paper examines the development of a design oriented framework for the design of production management systems PMS It is concluded that such a framework should encourage a holistic and integrated PMS design A holistic design acknowledges that social and technical subsystems can achieve better management performance by collaborating with one another than one can individually An integrated design does not artificially separate the PMS from the shop floor it manages but rather considers the two as intertwined and complementary parts of an organizational whole This paper postulates four key axioms to be considered for achieving such a PMS design A dual modelling framework is then presented that supports the envisioned PMS design approach and that further allows the use of computer simulation Its practical contribution is analysed in an industrial case study **Advances in Production**

**Models and Tools for Managing Development Processes** Bernhard Westfechtel,2003-07-31 The development of products in disciplines such as mechanical electrical or software engineering is a challenging task Costs have to be reduced the ti to market has to be shortened and quality has to be improved Skilled engineers and sophisticated tools for supporting technical work are necessary prerequisites yet they are not sufficient for meeting these ambitious goals In addition the work of developers must be coordinated so that they cooperate smoothly To this end the steps of the development process have to be planned an engineer executing a task must be provided with documents and tools the results of development activities have to be fed back to management which in turn has to adjust the plan accordingly the documents produced in different working areas have to be kept consistent with each other etc This book reports on models and tools for managing development processes It provides both a survey of the current state of the art and presents our own contributions The material covered in this book is based on research in different engineering disciplines mechanical software and chemical engineering It presents a unified view on the management of development processes in these disciplines

**Production Management Methods** Cláudio Walter, Francisco José Kliemann, José Palazzo Moreira Oliveira,1994 National borders are becoming increasingly open for goods and ideas and this is creating challenges both for the industrialized countries and for the developing world Most countries wish to keep and to grow their industries and this requires the design and operation of very complex systems in such a way as to maximize jobs profits and the quality of life in general under quite different conditions An improved understanding of the distinct operations variable trade offs indeed quite individual conceptual models of manufacturing systems in different regions is therefore necessitated This publication addresses various aspects involved in the achievement of the aim It presents new developments in production management methods tools for the evaluation of them and assessments of the adequacy of different production management methods applied to various classes of production systems Test cases and application statistics are analysed thereby affording a comprehensive picture of the present situation and a vision for enhanced future development
