Modelling The City Performance Policy And Planning:

Modelling the City C. S. Bertuglia, G. P. Clarke, A. G. Wilson, 2012-08-21 Modelling the City examines the changing role of urban models in respect to both the need to readdress measures of urban well being and the perceived need to bring model outputs more in tune with key planning problems. The authors argue that whilst there has been substantial progress with a wide range of theoretical problems in urban modelling, modellers have not paid enough attention to the usefulness of their model outputs in terms of indicators which offer new insights into the workings of the city or region. Modelling the City offers a new geography of performance indicators for the public and private sector based on the principles of spatial interaction

The City and Its Sciences Cristoforo S. Bertuglia, Giuliano. Bianchi, Alfredo Mela, 2012-12-06 Recent developments in the field of urban analysis and management are investigated in this book. It is a wide ranging collection of essays on the subject drawn from a long term project and seminar held in Italy to review the state of the art and speculate on the future influence on the sciences of the city of the complexity concept. Of particular interest is the variety of points of view often contrasting and the attempt to go beyond the conventional approaches to the analysis and the planning of the city. While focussing mainly on the European and in particular Italian context the discussion is of general relevance and valuable to anyone concerned with the prospects for the city in the new millennium

Urban Planning and Management Kenneth George Willis, R. Kerry Turner, Ian Bateman, 2001 Urban Planning and Management presents a collection of key articles on different aspects of sustainability in urban planning and management whilst simultaneously illustrating the conflicting arguments about whether and how sustainability should be achieved. Part I covers the factors determining the life and death of cities and what is required to achieve sustainable development. In Part II issues of whether cities should be compact or dispersed and concepts of sustainable development in third world cities and societies are explored. Parts III and IV examine design as an integral part of producing a sustainable urban policy and energy use. Part V deals with Local Agenda 21 issues and Part VI looks at town planning. Part VII discusses transport as both a product and determinant of sustainable urban planning and management. Parts VIII, IX and X examine the sustainable provision of other services including waste collection, recycling schemes and water. In Part XI sustainability is shown as occurring within and constrained by legal property rights and management practices
