Models Of Cognitive Development:

Models Of Cognitive Development Ken Richardson,2019-07-12 In spite of its obvious importance and popularity the field of cognitive development remains highly fragmented due to the vast diversity of models of what knowledge and reasoning are and how they develop This new Classic Edition of Models of Cognitive Development aims to overcome this barrier through its careful introduction illustrated examples and approach to helping students think more critically about the subject In this significant work Richardson provides students researchers and comparative theoreticians with a cohesive understanding of the area by organizing diverse schools frameworks and approaches according to a much smaller set of underlying assumptions or preconceptions which themselves can be historically interrelated By understanding these it's possible to find pathways around the area more confidently as a whole to see the wood as well as the theoretical trees and be able to react to individual models more critically and constructively The Classic Edition of this core text will be essential reading for undergraduate and graduate students of cognitive development *Adult Cognitive Development* Karen S. Kitchener,1986

Children's Understanding Graeme S. Halford,2014-02-25 This work argues that cognitive development is experience driven and processes entailed in acquiring information about the world are analyzed based on recent models of learning and induction The way information is represented and accessed when performing cognitive tasks is considered paying particular attention to the implications of Parallel Distributed Processing PDP models for cognitive development The first half of the book contains analyses of human reasoning processes drawing on PDP models of analogy development of strategies and task complexity all based on aspects of PDP representations It is proposed that PDP representations become more differentiated with age so more vectors can be processed in parallel with the result that structures of greater complexity can be processed This model gives an account of previously unexplained difficulties in children's reasoning including some which were influential in stage theories The second half of the book examines processes entailed in some representative cognitive developmental tasks including transitive inference deductive inference categorical syllogisms hypothesis testing learning set acquisition acquisition and transfer of relational structures humor hierarchical classification and inclusion understanding of quantity arithmetic word problems algebra conservation mechanics and the concept of mind Process accounts of tasks are emphasized based on applications of recent developments in cognitive science Probabilistic Models of Cognitive Development Fei Xu,2011

Neo-Piagetian Theories of Cognitive Development Andreas Demetriou,Michael Shayer,Anastasia Efklides,2016-07-07 Piagetian theory was once considered able to describe the structure and development of human thought As a result it generated an enthusiasm that it could direct education to develop new teaching methods particularly in science and mathematics However disillusionment with Piagetian theory came rather quickly because many of its structural and developmental assumptions appeared incongruent with empirical evidence In recent years several neo Piagetian theories have been proposed which try to preserve the strengths of Piaget s theory while eliminating its weaknesses At the same time several other models have been advanced originating from different epistemological traditions such as cognitive differential psychology or socio historical approaches Originally published in 1992 this title was unique in representing most of these theories and traditions Specifically the authors focus their work on the educational implications of their research The chapters are organised in three parts the first part presents some widely known models of cognitive development and discusses their implications for different aspects of education the second part is devoted to learning and cognitive acceleration while part three highlights teaching methods that would improve the acquisition of particular skills in specific areas Written by an eminent group of truly international contributors this title will still be useful to students and researchers in cognitive development and education as well as educational policy makers

Developing Cognitive Competence Tony J. Simon,Graeme S. Halford,2015-05-15 Although computational modeling is now a widespread technique in cognitive science and in psychology relatively little work in developmental psychology has used this technique The approach is not entirely new as a small group of researchers has attempted to create computational accounts of cognitive developmental phenomena since the inception of the technique It should seem obvious that transition mechanisms or how the system progresses from one level of competence to the next ought to be the central question for investigation in cognitive developmental psychology Yet if one scans the literature of modern developmental studies it appears that the question has been all but ignored However only recently have advances in computational technology enabled the researcher access to fully self modifying computer languages capable of simulating cognitive change By the beginning of the 1990s increasing numbers of researchers in the cognitive sciences were of the opinion that the tools of mathematical modeling and computer simulation make theorizing about transition mechanisms both practical and beneficial by using both traditional symbolic computational systems and parallel distributed processing or connectionist approaches Computational models make it possible to define the processes that lead to a system being transformed under environmental influence from one level of competence observed in children to the next most sophisticated level By coding computational models into simulations of

actual cognitive change they become tangible entities that are accessible to systematic study. Unfortunately little of what has been produced has been published in journals or books where many professionals would easily find them. Feeling that developmental psychologists should be exposed to this relatively new approach a symposium was organized at the biennial meeting of the Society for Research in Child Development. The cost of entry was that speakers had to have a running computational model of a documented cognitive transition. Inspired by that conference this volume is the first collection where each content chapter presents a fully implemented self-modifying simulation of some aspect of cognitive development. Previous collections have tended to discuss general approaches less than fully implemented models or non self-modifying models. Along with introductory and review chapters this volume presents a set of truly developmental computational models a collection that can inform the interested researcher as well as form the basis for graduate level courses

Neural Network Models of Cognitive Development Gert Westermann, 2000 *The Child as Thinker* Sara Meadows, 2012-09-10 This second edition of *The Child as Thinker* has been thoroughly revised and updated to provide an informed and accessible overview of the varied and extensive literature on children's cognition. Both theory and research data are critically examined and educational implications are discussed. After a brief discussion of the nature and subject of cognition Sara Meadows reviews children's thinking in detail. She discusses the ways children remember and organise information in general, the acquisition of skills such as reading, writing and arithmetic, and the development of more complex reasoning as children grow to maturity. As well as studies that typically describe a generalised child, the book also reviews some of the main areas relevant to individual differences in normal cognitive development and critically examines three major models of cognitive development. In outlining the work of Piaget, information processing accounts and neo-Vygotskian theories, she also evaluates their different explanations of cognitive development and their implications for education. Finally, the book examines biological and social factors that may be involved in normal and suboptimal cognitive development. Sara Meadows provides an important review of the crucial issues involved in understanding cognitive development and of the new data and models that have emerged in the last few years. This book brings together areas and approaches that have hitherto been independent and examines their strengths and weaknesses. *The Child as Thinker* is essential reading for all students of cognitive development

Cognitive Developmental Change Andreas Demetriou, Athanassios Raftopoulos, 2005-01-06

Cognitive Developmental Change makes a fascinating contribution to the fields of developmental cognitive and educational science by bringing together a uniquely diverse range of perspectives for analysing the dynamics of change. Connecting traditional Piagetian

information processing and psychometric approaches with newer frameworks for the analysis of developmental change it provides the reader with an account of the latest theory and research at the time of publication The contributors to the volume all internationally respected experts were asked when writing to consider three main aspects of cognitive change Its object what changes in the mind during development its nature how does change occur and its causes why does change occur Or what are the internal and external factors responsible for cognitive change As a result chapters cover key theories of cognitive change the factors that affect change including neurological emotional and socio cultural factors and methods for measuring and modelling change Connectionist Models of Development Philip T. Quinlan,2004-03-01 Connectionist Models of Development is an edited collection of essays on the current work concerning connectionist or neural network models of human development The brain comprises millions of nerve cells that share myriad connections and this book looks at how human development in these systems is typically characterised as adaptive changes to the strengths of these connections The traditional accounts of connectionist learning based on adaptive changes to weighted connections are explored alongside the dynamic accounts in which networks generate their own structures as learning proceeds Unlike most connectionist accounts of psychological processes which deal with the fully mature system this text brings to the fore a discussion of developmental processes To investigate human cognitive and perceptual development connectionist models of learning and representation are adopted alongside various aspects of language and knowledge acquisition There are sections on artificial intelligence and how computer programs have been designed to mimic the development processes as well as chapters which describe what is currently known about how real brains develop This book is a much needed addition to the existing literature on connectionist development as it includes up to date examples of research on current controversies in the field as well as new features such as genetic connectionism and biological theories of the brain It will be invaluable to academic researchers post graduates and undergraduates in developmental psychology and those researching connectionist neural networks as well as those in related fields such as psycholinguistics

Handbook of Child Psychology and Developmental Science, Theory and Method ,2015-03-31 The essential reference for human development theory updated and reconceptualized The Handbook of Child Psychology and Developmental Science a four volume reference is the field defining work to which all others are compared First published in 1946 and now in its Seventh Edition the Handbook has long been considered the definitive guide to the field of developmental science Volume 1 Theory and Method presents a rich mix of classic and contemporary theoretical perspectives but the dominant views throughout are marked by an emphasis on the dynamic interplay of all facets of the developmental system across the life span incorporating the range of biological cognitive emotional social cultural and ecological levels of analysis Examples of the theoretical approaches discussed in the volume include those pertinent to human evolution self regulation the development of dynamic skills and positive youth development The research methodological and applied implications of the theoretical models discussed in the volume are

presented Understand the contributions of biology person and context to development within the embodied ecological system Discover the relations among individual the social world culture and history that constitute human development Examine the methods of dynamic developmental research Learn person oriented methodological approaches to assessing developmental change The scholarship within this volume and as well across the four volumes of this edition illustrate that developmental science is in the midst of a very exciting period There is a paradigm shift that involves increasingly greater understanding of how to describe explain and optimize the course of human life for diverse individuals living within diverse contexts This Handbook is the definitive reference for educators policy makers researchers students and practitioners in human development psychology sociology anthropology and neuroscience

Adult Development Michael L. Commons, Cheryl Armon, Lawrence Kohlberg, Francis A. Richards, Tina A. Grotzer, Jan D. Sinnott, 1990-05-23 In recent years researchers have begun to focus attention on postformal thought the development of thought in late adolescence and adulthood questioning Piaget's early terminus of structural development in adolescence This volume brings together the works of distinguished authors in the field of postformal operational cognitive social and perceptual development to examine the models and methodology used to investigate postformal thought The contributors represent the variety of approaches that characterize this body of research while at the same time seeking to unify this diverse literature with a common language An ideal text for advanced courses in adult development this volume is also a primary reference for developmental and educational psychologists and students working in the fields of cognitive development adolescent and adult development and lifespan development Divided into four parts the volume begins by examining both Piagetian and nonstructural models of adult cognitive development considering them in light of current research developments Individual papers address models of equilibrium knowledge reflective judgment ego development and consciousness In Part II the contributors discuss the measurement and comparison of cognitive development in adults exploring such topics as construct validity and theories of adult development the structural and developmental relations between formal and postformal capacities and the relationship between Piagetian and Kohlbergian stages The third section assesses the research and theory of adult reasoning in the moral domain while the concluding chapter investigates critical evaluations of postformal research Numerous tables and figures enhance the discussions
