*Modern Armored Fighting Vehicles* Thomas Bruce, 2018-09-13 Armored vehicles are essentially armed and armored high mobility off road vehicles. While their mobility aspects are clearly very important there are many high mobility off road vehicles not designed for military applications. Therefore the key defining aspects of an Armored Fighting Vehicle (AFV) as the name implies is the armament they carry to inflict damage and the armor they possess as protection against damage. There has within recent years been a great number of exciting and innovative developments in critical AFV technologies. Key among these are significant enhancements to both armament and armor. The primary armament of an AFV consists of relatively large caliber guns that fire a range of ballistic munitions including kinetic energy penetrators, high explosive incendiary and shaped charge warhead tipped rounds. Some guns are also capable of firing anti tank guided missiles. In addition to the main weapon many AFVs are also equipped with a range of secondary weapons including machine guns, grenade launchers, mortar tubes and missile launchers. These weapons and their capabilities in penetrating standardized armor is reviewed in detail in this volume. AFV armor is designed to protect the vehicle against both threats fired by other AFVs and threats originating from any other source including buried mines, infantry portable weapons, air launched missiles, artillery shells and improvised devices. Protection against each type of threat often requires a unique type of armor solution. These solutions are then layered onto the vehicle to provide the required protection. Vehicle armor systems include applique armor, spaced armor, reactive armor, cage armor, netted armor, electric armor, spall systems, dazzlers, jammers and Active Protection Systems (APS). Each type of armor is covered in detail in this volume both at a system level and with respect to their integration into specific AFVs. This volume covers the theory of AFV design, of armament performance and of armor design and performance. As well, most modern AFVs are described and discussed. A modern AFV is considered to be one that was either designed over the last 20 years or is likely to continue to see service with front line combat troops for the foreseeable future. Main battle tanks, light tanks, reconnaissance vehicles, tracked and wheeled armored personnel carriers, infantry fighting vehicles and tank destroyers are covered.

**Modern Armored Fighting Vehicles** Jack Livesey, 2008 Previously published as part of a larger volume *The world encyclopedia of armoured fighting vehicles*. T p verso **Armored Vehicle History** Evelyn Cho, AI, 2025-01-30 Armored Vehicle History presents a comprehensive journey through the evolution of military armored vehicles from World War I's rudimentary armored cars to today's sophisticated main battle tanks. This authoritative work expertly weaves together the technological, tactical and strategic aspects of armored warfare, demonstrating how battlefield needs drove innovation and how these mechanical giants revolutionized modern military operations. The book meticulously traces the development of key technological advances such as the introduction of sloped armor during World War II and the continuous improvements in suspension systems and engine power. Through detailed case studies and technical specifications drawn from military

archives and engineering documents readers gain insight into how each major conflict catalyzed new developments in armor design and combat effectiveness The author skillfully balances technical detail with operational analysis making complex engineering concepts accessible to both military historians and mechanical engineering enthusiasts Progressing chronologically the narrative explores the foundational principles of armored vehicle design before delving into the evolution of tank doctrine and modern combat operations What sets this work apart is its holistic approach examining not just main battle tanks but the entire spectrum of armored vehicles including infantry fighting vehicles and specialized platforms The book concludes by addressing contemporary challenges such as the role of heavy armor in asymmetric warfare making it an invaluable resource for understanding both the history and future of mechanized warfare Modern U.S. Tanks and AFVs

*Iran's Military Forces in Transition* Anthony H. Cordesman, 1999-03-30 Iran today is still struggling with the legacy of its own Islamic revolution and is deeply divided between the moderates who enjoy broad public support and the conservatives who control the levers of power The mixed policies that result are reflected in Iran s ambivalent military posture In recent years Iran has only conducted a limited build up of its armed forces and has cut defense spending and arms imports On the other hand Iran has developed a carefully focused program that threatens shipping in the lower Gulf and the world s oil exports It has strengthened its capability for unconventional warfare and continues to be a significant proliferator setting up indigenous military industries and developing a greater ability to import weapons In this authoritative analysis of interest to Middle Eastern specialists and military affairs experts alike Anthony Cordesman concludes that the continuation of Iran s current defensive security posture depends as much on these economic

factors as on the outcomes of domestic political rivalries Iran may eventually limit any military expansion to a necessary defensive strength and set strategic goals for itself that are compatible with the legitimate interests of other nations or it may choose a more aggressive course Regardless of the ultimate outcome argues Cordesman it does no good to either demonize or excuse Iranian policies Instead the United States and other nations with interests in the Middle East and Central Asia need to deal realistically with Iran as a reemerging regional power
