Collett, 1991-10 A textbook of an intermediate level this work shows how binary data can be analyzed using a modelling approach dwelling on practical aspects incorporating recent work on checking the adequacy of fitted models and showing how computational facilities can be exploited

Modelling Binary Data D. Collett, 2013-08-22 *Analysis of Binary Data* D.R. Cox, E. J. Snell, 2018-02-19 The first edition of this book 1970 set out a systematic basis for the analysis of binary data and in particular for the study of how the probability of success depends on explanatory variables The first edition has been widely used and the general level and style have been preserved in the second edition which contains a substantial amount of new material This amplifies matters dealt with only cryptically in the first edition and includes many more recent developments In addition the whole material has been reorganized in particular to put more emphasis on maximum likelihood methods There are nearly 60 further results and exercises The main points are illustrated by practical examples many of them not in the first edition and some general essential background material is set out in new Appendices

Generalized Linear Models Dipak K. Dey, Sujit K. Ghosh, Bani K. Mallick, 2000-05-25 This volume describes how to conceptualize perform and critique traditional generalized linear models GLMs from a Bayesian perspective and how to use modern computational methods to summarize inferences using simulation Introducing dynamic modeling for GLMs and containing over 1000 references and equations *Generalized Linear Models* considers parametric and semiparametric approaches to overdispersed GLMs presents methods of analyzing correlated binary data using latent variables It also proposes a semiparametric method to model link functions for binary response data and identifies areas of important future research and new applications of GLMs

Bringing Bayesian Models to Life Mevin B. Hooten, Trevor Hefley, 2019-05-15 *Bringing Bayesian Models to Life* empowers the reader to extend enhance and implement statistical models for ecological and environmental data analysis We open the black box and show the reader how to connect modern statistical models to computer algorithms These algorithms allow the user to fit models that answer their scientific questions without needing to rely on automated Bayesian software We show how to handcraft statistical models that are useful in ecological and environmental science including linear and generalized linear models spatial and time series

models occupancy and capture recapture models animal movement models spatio temporal models and integrated population models Features R code implementing algorithms to fit Bayesian models using real and simulated data examples A comprehensive review of statistical models commonly used in ecological and environmental science Overview of Bayesian computational methods such as importance sampling MCMC and HMC Derivations of the necessary components to construct statistical algorithms from scratch Bringing Bayesian Models to Life contains a comprehensive treatment of models and associated algorithms for fitting the models to data We provide detailed and annotated R code in each chapter and apply it to fit each model we present to either real or simulated data for instructional purposes Our code shows how to create every result and figure in the book so that readers can use and modify it for their own analyses We provide all code and data in an organized set of directories available at the authors websites
