Computational Modeling of Human Language

Acquisition Afra Alishahi,2010-10-10 Human language acquisition has been studied for centuries but using computational modeling for such studies is a relatively recent trend. However computational approaches to language learning have become increasingly popular mainly due to advances in developing machine learning techniques and the availability of vast collections of experimental data on child language learning and child adult interaction. Many of the existing computational models attempt to study the complex task of learning a language under cognitive plausibility criteria such as memory and processing limitations that humans face and to explain the developmental stages observed in children. By simulating the process of child language learning computational models can show us which linguistic representations are learnable from the input that children have access to and which mechanisms yield the same patterns of behaviour that children exhibit during this process. In doing so computational modeling provides insight into the plausible mechanisms involved in human language acquisition and inspires the development of better language models and techniques. This book provides an overview of the main research questions in the field of human language acquisition. It reviews the most commonly used computational frameworks, methodologies and resources for modeling child language learning and the evaluation techniques used for assessing these computational models. The book is aimed at cognitive scientists who want to become familiar with the available computational methods for investigating problems related to human language acquisition as well as computational linguists who are interested in applying their skills to the study of child language acquisition. Different aspects of language learning are discussed in separate chapters including the acquisition of the individual words, the general regularities which govern word and sentence form and the associations between form and meaning. For each of these aspects the challenges of the task are discussed and the relevant empirical findings on children are summarized. Furthermore the existing computational models that attempt to simulate the task under study are reviewed and a number of case studies are presented.

The

Intentionality Model and Language Acquisition Lois Bloom,Erin Tinker,2001-12-21

The Intentionality Model builds on the child's engagement in a world of persons and objects the effort that learning language requires and the essential tension

between engagement and effort that propels language acquisition According to this perspective children learn language in acts of expression and interpretation they work at acquiring language all aspects of a child s development contribute to this process Provides results of a longitudinal study which examined language acquisition in the second year of life in the context of developments in cognition affect and social connectedness Results of lag sequential analyses are reported to show how different behaviors words sentences emotional expressions conversational interactions and construction thematic relations between objects in play converged both in the stream of children s actions in everyday events in real time an in developmental time between the emergence of words at about 13 months and the transition to simple sentences at about 2 years of age The conclusions show that performance counts for explaining language acquisition language is not acquired independently but in relation to other behaviors acquiring language is not easy and requires the work of behavioral coordination

Infant Pathways to Language John Colombo,Peggy McCardle,Lisa Freund,2008-10-15 The recent progress in cognitive neuroscience and the importance of genetic factors and gene environment interactions in shaping behavioral functions in early childhood have both underscored the primacy of early experience and development on brain development and function The contributors to this volume discuss different paradigms and approaches

Modeling, Control and Optimization of Complex Systems Weibo Gong,Leyuan Shi,2012-12-06 Modeling Control And Optimization Of Complex Systems is a collection of contributions from leading international researchers in the fields of dynamic systems control theory and modeling These papers were presented at the Symposium on Modeling and

Optimization of Complex Systems in honor of Larry Yu Chi Ho in June 2001 They include exciting research topics such as modeling of complex systems power control in ad hoc wireless networks adaptive control using multiple models constrained control linear quadratic control discrete events Markov decision processes and reinforcement learning optimal control for discrete event and hybrid systems optimal representation and visualization of multivariate data and functions in low dimensional spaces *Analytic Methods in Systems and Software Testing* Ron S. Kenett,Fabrizio Ruggeri, Frederick W. Faltin, 2018-06-20 A comprehensive treatment of systems and software testing using state of the art methods and tools This book provides valuable insights into state of the art software testing methods and explains with examples the statistical and analytic methods used in this field Numerous examples are used to provide understanding in applying these methods to real world problems Leading authorities in applied statistics computer science and software engineering present state of the art methods addressing challenges faced by practitioners and researchers involved in system and software testing Methods include machine learning Bayesian methods graphical models experimental design generalized regression and reliability modeling *Analytic Methods in Systems and Software Testing* presents its comprehensive collection of methods in four parts Part I Testing Concepts and Methods Part II Statistical Models Part III Testing Infrastructures and Part IV Testing Applications It seeks to maintain a focus on analytic methods while at the same time offering a contextual landscape of modern engineering in order to introduce related statistical and probabilistic models used in this domain This makes the book an incredibly useful tool offering interesting insights on challenges in the field for researchers and practitioners alike Compiles cutting edge methods and examples of analytical approaches to systems and software testing from leading authorities in applied statistics computer science and software engineering Combines methods and examples focused on the analytic aspects of systems and software testing Covers logistic regression machine learning Bayesian methods graphical models experimental design generalized regression and reliability models Written by leading researchers and practitioners in the field from diverse backgrounds including research business government and consulting Stimulates research at the theoretical and practical level *Analytic Methods in Systems and Software Testing* is an excellent advanced reference directed toward industrial and academic readers whose work in systems and software development approaches or surpasses existing frontiers of testing and validation procedures It will also be valuable to post graduate students in computer science and mathematics **The Construct of Language Proficiency** Ludo Verhoeven, John H. A. L. de Jong, 1992-01-01 This books aims to open up new perspectives in the study of language proficiency by bringing together current research from different fields in psychology and linguistics All contributions start out from empirical studies which are then related to applications in language assessment The book also serves as a survey of recent developments in psycholinguistic research in the Netherlands The book starts out with a thorough introduction of international literature on models of language proficiency language development and its assessment Section 1 deals with first language proficiency and addresses such problems as

grammar in early child language grammatical proficiency and its variance across a range of ages reading abilities and writing skills Section 2 focuses on multilingual proficiency and deals with test bias in relation to the background of the second language learner bilingual proficiency in ethnic minority children the development of the second language learner lexicon communicative competence of school age children in the context of second language learning the assessment of foreign language attrition and the dimensionality in oral foreign language proficiency
