Modern Computer Algebra:

Modern Computer Algebra Joachim von zur Gathen, Jürgen Gerhard, 2013-04-25 Now in its third edition this highly successful textbook is widely regarded as the bible of computer algebra

Algorithms for Computer Algebra Keith O. Geddes, Stephen R. Czapor, George Labahn, 1992-09-30 Algorithms for Computer Algebra is the first comprehensive textbook to be published on the topic of computational symbolic mathematics The book first develops the foundational material from modern algebra that is required for subsequent topics It then presents a thorough development of modern computational algorithms for such problems as multivariate polynomial arithmetic and greatest common divisor calculations factorization of multivariate polynomials symbolic solution of linear and polynomial systems of equations and analytic integration of elementary functions Numerous examples are integrated into the text as an aid to understanding the mathematical development The algorithms developed for each topic are presented in a Pascal like computer language An extensive set of exercises is presented at the end of each chapter Algorithms for Computer Algebra is suitable for use as a textbook for a course on algebraic algorithms at the third year fourth year or graduate level Although the mathematical development uses concepts from modern algebra the book is self contained in the sense that a one term undergraduate course introducing students to rings and fields is the only prerequisite assumed The book also serves well as a supplementary textbook for a traditional modern algebra course by presenting concrete applications to motivate the understanding of the theory of rings and fields

Introduction to Maple Andre HECK, 2012-12-06 In symbolic computation on computers also known as computer algebra keyboard and display replace the traditional pencil and paper in doing mathematical computations Interactive computer programs which are called computer algebra systems allow their users to compute not only with numbers but also with symbols formulae equations and so on Many mathematical computations such as differentiation integration and series expansion of functions and inversion of matrices with symbolic entries can be carried out quickly with emphasis on exactness of results and without much human effort Computer algebra systems are powerful tools for mathematicians physicists chemists engineers technicians psychologists sociologists in short for anybody who needs to do mathematical computations Computer algebra systems are indispensable in modern pure and applied scientific research and education This book is a gentle introduction to one of the modern computer algebra systems viz Maple Primary emphasis is on learning what can be done with Maple and how it can be used to solve applied mathematical problems To this end the book contains many examples and exercises both

elementary and more sophisticated They stimulate you to use Maple and encourage you to find your way through the system An advice read this book in conjunction with the Maple system try the examples make variations of them and try to solve the exercises

Modern Algebra Raleigh Schorling, John Roscoe Clark, 1924 **Artificial Intelligence and Symbolic Mathematical Computing** Jacques Calmet, J. A. Campbell, 1993 This volume contains the papers updated in some cases presented at the first AISMC Artificial Intelligence and Symbolic Mathematical Computations conference held in Karlsruhe August 3-6 1992 This was the first conference to be devoted to such a topic after a long period when SMC made no appearance in AI conferences though it used to be welcome in the early days of AI Some conferences were held recently on mathematics and AI but none was directly comparable in scope to this conference Because of the novelty of the domain authors were given longer allocations of time than usual in which to present their work As a result extended and fruitful discussions followed each paper The introductory chapter in this book which was not presented during the conference reflects in many ways the flavor of these discussions and aims to set out the framework for future activities in this domain of research In addition to the introduction the volume contains 20 papers PUBLISHER'S WEBSITE
