Measuring Hospital Performance

Charles Shaw

Measuring Hospital Performance:

Measuring Hospital Performance John R. Griffith, 1978 A proposal is made for a new set of measures of community general hospital performance. The set is conceived as summarized in fewer than two dozen specific statistics covering three areas of cost, quantity and quality of hospital services and as placing heavy emphasis upon the identification of a service population or community for each hospital. The statistics would be presented in terms of this community. Dato 891116 internt il

Measurement

of Hospital Performance Gerard O'Callaghan, 2011 The rationale for carrying out this research was to address the clear lack of knowledge surrounding the measurement of public hospital performance in Ireland. The objectives of this research were to develop a comprehensive model for measuring hospital performance and using this model to measure the performance of public acute hospitals in Ireland in 2007. Having assessed the advantages and disadvantages of various measurement models the Data Envelopment Analysis (DEA) model was chosen for this research. DEA was initiated by Charnes, Cooper and Rhodes in 1978 and further developed by Fare et al 1983 and Banker et al 1984. The method used to choose relevant inputs and outputs to be included in the model followed that adopted by Casu et al 2005 which included the use of focus groups. The main conclusions of the research are threefold. Firstly it is clear that each stakeholder group has differing opinions on what constitutes good performance. It is therefore imperative that any performance measurement model would be designed within parameters that are clearly understood by any intended audience. Secondly there is a lack of publicly available qualitative information in Ireland that inhibits detailed analysis of hospital performance. Thirdly based on available qualitative and quantitative data the results indicated a high level of efficiency among the public acute hospitals in Ireland in their staffing and non-pay costs averaging 98.5%. As DEA scores are sensitive to the number of input and output variables as well as the size of the sample it should be borne in mind that a high level of efficiency could be as a result of using DEA with too many variables compared to the number of hospitals. No hospital was deemed to be scale efficient in any of the models even though the average scale efficiency for all of the hospitals was relatively high at 90.3%. Arising from this research the main recommendations would be that information on medical outcomes, survival rates and patient satisfaction should be made publicly available in Ireland that despite a high average efficiency level that many individual hospitals need to focus on improving their technical and scale efficiencies and that performance measurement models should be developed that would include more qualitative data.

Measuring Quality Performance in Health Care Dia Kamel Hassan,2007-01-10 Health cost is

escalating Today health care systems are responsible for a considerable proportion of public expenses Patient safety became a major concern and evolved as a global problem with the increase in public perception on adverse events As a result

improving the quality of care and measuring performance using effective measurement tools became major public and political issues challenging health care organizations In response to this considerable effort and expenses have been devoted to develop and implement quality initiatives in health care organizations It is essential that the assessment of quality

initiatives use evidence based measurements to evaluate their outcomes Joint Commission International JCI a wholly controlled non profit affiliate of Joint Commission on Accreditation of Healthcare Organizations JCAHO was established with a goal to continuously improve the level of healthcare organizations by introducing international standards and indicators applicable to different countries around the globe Anecdotal evidence and numerous testimonials suggest performance improvement yet no empirical studies have been conducted to demonstrate the overall benefits of applying the JCI standards in countries outside the US This book presents a robust methodology to measure quality performance of health care organizations and evaluate the effectiveness of JCI standards in improving the quality of care The book is based on a study that used a holistic performance measurement model to measure the effect of the newly developed JCI standards on the perceived quality performance and the progress toward organizational excellence of a 400 bed hospital in a developing country The study used a longitudinal quantitative design over a period of 15 months Structured questionnaires were used to collect data from 250 staff 250 patients and families 200 patients medical records and 60 self assessment surveys based on the accreditation bodies approach The results showed a significant perceived improvement in the overall organizational performance index 15 months after the implementation of JCI standards The results highlighted many areas of strength in the standards mainly in their impact on organizational excellence quality improvement and patients safety leadership and

management performance patients satisfaction and delight organizational learning organizational ethical performance and documentation The results also identified opportunities for improvement in the JCI standards with respect to human resource management and the absence of standards that address issues existing in organizations with corporate structures
