*Noble Metals and Biological Systems* Robert R. Brooks, 1992-04-06 *Noble Metals and Biological Systems* examines the relationship between noble metals gold silver and platinum group metals and biological systems The book is divided into three parts Part 1 is concerned with the analytical chemistry of noble metals and includes a description of the latest methods of analysis Part 2 describes such topics as ecology and environmental science of noble metals as they pertain to biogeochemical exploration noble metals in hair the environmental geochemistry of palladium microorganisms and noble metals animals and noble metals and a general survey of noble metals in the environment Coverage is comprehensive and includes information regarding the use of dogs and termites as field assistants in mineral prospecting as well as the fascinating story of the gold bug a microorganism that plates itself with gold Part 3 is devoted entirely to noble metals in the treatment of disease and includes chapters describing the use of osmium and gold for arthritis treatment silver as a bactericide and platinum and ruthenium as anticancer agents *Noble Metals and Biological Systems* will provide fascinating reading for applied geochemists environmentalists public health specialists ecologists microbiologists clinical biochemists oncologists and specialists in rheumatic diseases **Explore** ,1993 *Research Grants Index* National Institutes of Health (U.S.). led to their large scale production by various toxic solvents or high energy techniques However due to the growing awareness of environmental and safety issues the use of clean nontoxic and environment friendly ways to synthesize metal nanoparticles has emerged out of necessity The use of biological resources such as microbes plant parts vegetable wastes agricultural wastes gums etc has grown to become an alternative way of synthesizing metal nanoparticles This biogenic synthesis is green environmentally friendly cost effective and nontoxic The current multi authored book includes recent information and builds a database of bioreducing agents for various metal nanoparticles using different precursor systems Green Metal Nanoparticles also highlights different simple cost effective environment friendly and easily scalable strategies and includes parameters for controlling the size and shape of the materials developed from the various greener methods

**Nanoscale Science and Technology** Robert Kelsall, Ian W. Hamley, Mark Geoghegan, 2005-04-15 Nanotechnology is a vital new area of research and development addressing the control modification and fabrication of materials structures and devices with nanometre precision and the synthesis of such structures into systems of micro and macroscopic dimensions Future applications of nanoscale science and technology include motors smaller than the diameter of a human hair and single celled organisms programmed to fabricate materials with nanometer precision Miniaturisation has revolutionised the semiconductor industry by making possible inexpensive integrated electronic circuits comprised of devices and wires with sub micrometer dimensions These integrated circuits are now ubiquitous controlling everything from cars to toasters The next level of miniaturisation beyond sub micrometer dimensions into nanoscale dimensions invisible to the unaided human eye is a booming area of research and development This is a very hot area of research with large amounts of venture capital and government funding being invested worldwide as such Nanoscale Science and Technology has a broad appeal based upon an interdisciplinary approach covering aspects of physics chemistry biology materials science and electronic engineering Kelsall et al present a coherent approach to nanoscale sciences which will be invaluable to graduate level students and researchers and practising engineers and product designers
