Non-Archimedean Analysis: Quantum Paradoxes, Dynamical Systems and Biological Models Andrei Y.

Khrennikov, 2013-03-07 *Natur non facit saltus* This book is devoted to the fundamental problem which arises continuously in the process of the human investigation of reality the role of a mathematical apparatus in a description of reality We pay our main attention to the role of number systems which are used or may be used in this process We shall show that the picture of reality based on the standard since the works of Galileo and Newton methods of real analysis is not the unique possible way of presenting reality in a human brain There exist other pictures of reality where other number fields are used as basic elements of a mathematical description In this book we try to build a p -adic picture of reality based on the fields of p -adic numbers $\mathbb{Q}_p$ and corresponding analysis a particular case of so called non Archimedean analysis However this book must not be considered as only a book on p -adic analysis and its applications We study a much more extended range of problems Our philosophical and physical ideas can be realized in other mathematical frameworks which are not obliged to be based on p -adic analysis We shall show that many problems of the description of reality with the aid of real numbers are induced by unlimited applications of the so called Archimedean axiom

Mathematical Reviews, 2005 *Algebraic Integrability of Nonlinear Dynamical Systems on Manifolds* A.K. Prykarpatsky, Igor' Vladimirovich Mikitiuk, 1998-06-30. Noting that their research is not yet completed, Prykarpatsky, mathematics U of Mining and Metallurgy Cracow, Poland, and mechanics and mathematics NAS Lviv, Ukraine, and Mykytiuk, mechanics and mathematics NAS and Lviv Polytechnic State U, Ukraine, describe some of the ideas of Lie algebra that underlie many of the comprehensive integrability theories of nonlinear dynamical systems on manifolds. For each case they analyze, they separate the basic algebraic essence responsible for the complete integrability and explore how it is also, in some sense, characteristic for all of them. They cover systems with homogeneous configuration spaces, geometric quantization structures on manifolds, algebraic methods of quantum statistical mechanics and their applications, and algebraic and differential geometric aspects related to infinite dimensional functional manifolds. They have not indexed their work.

Methods of Functional Analysis and Topology, 2007 **P-Adic Mathematical Physics** Zoran Rakic, Igor V. Volovich, 2006-04-06. The subject of this conference was recent developments in p-adic mathematical physics and related areas. The field of p-Adic mathematical physics was conceived in 1987 as a result of attempts to find non-Archimedean approaches to space-time at the Planck scale as well as to strings. Since then many applications of p-adic numbers and adeles in physics and related sciences have emerged. Some of them are p-adic and adelic string theory, p-adic and adelic quantum mechanics and quantum field theory, ultrametricity of spin glasses, biological and hierarchical systems, p-adic dynamical systems, p-adic probability theory, p-adic models of cognitive processes and cryptography as well as p-adic and adelic cosmology.

Quantum Theory Guillaume Adenier, 2007-12-10. The material in this new Springer publication has arisen from a conference devoted to the 80 years of the Copenhagen Interpretation and to the question of the relevance of the

Copenhagen interpretation for the present understanding of quantum mechanics The nature of quantum fluctuations in the form of Stochastic Electrodynamics and other approaches to stochastic quantum mechanics was among others a central topic discussed during the conference especially during debates
