Nonlinear Two Point Boundary Value Probl:

Numerical Methods for Two-Point Boundary-Value Problems Herbert B. Keller, 2018-11-14 Elementary yet rigorous this concise treatment explores practical numerical methods for solving very general two point boundary value problems The approach is directed toward students with a knowledge of advanced calculus and basic numerical analysis as well as some background in ordinary differential equations and linear algebra After an introductory chapter that covers some of the basic prerequisites the text studies three techniques in detail initial value or shooting methods finite difference methods and integral equations methods Sturm Liouville eigenvalue problems are treated with all three techniques and shooting is applied to generalized or nonlinear eigenvalue problems Several other areas of numerical analysis are introduced throughout the study The treatment concludes with more than 100 problems that augment and clarify the text and several research papers appear in the Appendixes

Nonlinear Interpolation And Boundary Value Problems Paul W Elie, Johnny L Henderson, 2015-12-31 This book is devoted to the study of boundary value problems for nonlinear ordinary differential equations and focuses on questions related to the study of nonlinear interpolation In 1967 Andrzej Lasota and Zdzisław Opial showed that under suitable hypotheses if solutions of a second order nonlinear differential equation passing through two distinct points are unique when they exist then in fact a solution passing through two distinct points does exist That result coupled with the pioneering work of Philip Hartman on what was then called unrestricted n parameter families has stimulated 50 years of development in the study of solutions of boundary value problems as nonlinear interpolation problems The purpose of this book is two fold First the results that have been generated in the past 50 years are collected for the first time to produce a comprehensive and coherent treatment of what is now a well defined area of study in the qualitative theory of ordinary differential equations Second methods and technical tools are sufficiently exposed so that the interested reader can contribute to the study of nonlinear interpolation

Nonlinear Two-point Boundary Value Problems with Multiple Solutions Seymour V. Parter, WISCONSIN UNIV MADISON DEPT OF COMPUTER SCIENCES., 1970 The convergence of finite difference methods are examined in order to approximate the maximal solution of problems of the form $u'' + \lambda f(x, u) = 0$ with boundary conditions either $u(0) = b$ or $u(b) = 0$
