Second Edition, Revised and Expandedystems** Jean Dickinson Gibbons,1985 **Parametric and Nonparametric Inference for Statistical Dynamic Shape Analysis with Applications** Chiara Brombin,Luigi Salmaso,Lara Fontanella,Luigi Ippoliti,Caterina Fusilli,2016-02-11 This book considers specific inferential issues arising from the analysis of dynamic shapes with the attempt to solve the problems at hand using probability models and nonparametric tests The models are simple to understand and interpret and provide a useful tool to describe the global dynamics of the landmark configurations However because of the non Euclidean nature of shape spaces distributions in shape spaces are not straightforward to obtain The book explores the use of the Gaussian distribution in the configuration space with similarity transformations integrated out Specifically it works with the offset normal shape distribution as a probability model for statistical inference on a sample of a temporal sequence of landmark configurations This enables inference for Gaussian processes from configurations onto the shape space The book is divided in two parts with the first three chapters covering material on the offset normal shape distribution and the remaining chapters covering the theory of NonParametric Combination NPC tests The chapters offer a collection of applications which are bound together by the theme of this book They refer to the analysis of data from the FG NET Face and Gesture Recognition Research Network database with facial expressions For these data it may be desirable to provide a description of the dynamics of the expressions or testing whether there is a difference between the dynamics of two facial expressions or testing which of the landmarks are more informative in explaining the pattern of an expression Nonparametric Statistical Methods Myles Hollander,Douglas A. All of Nonparametric Statistics Larry Wasserman,2006-09-10 There are many books on various aspects of nonparametric inference such as density estimation nonparametric regression bootstrapping and wavelets methods But it is hard to nd all these topics covered in one place The goal of this text is to provide readers with a single book where they can nd a brief account of many of the modern topics in nonparametric inference The book is aimed at master s level or Ph D level statistics and computer science students It is also suitable for researchersin statistics machine lea ing and data mining who want to get up to speed quickly on modern n parametric methods My goal is to quickly acquaint the reader with the basic concepts in many areas rather than tackling any one topic in great detail In the interest of covering a wide range of topics while keeping the book short I have opted to omit most proofs Bibliographic remarks point the reader to references that contain further details Of course I have had to choose topics to include andto omit the title notwithstanding For the mostpart I decided to omit topics that are too big to cover in one chapter For example I do not cover classi cation or nonparametric Bayesian inference The book developed from my lecture notes for a half semester 20 hours course populated mainly by master s level students For Ph D **Nonparametric Techniques in Statistical Inference** Madan Lal Puri,1970-11-02 This book the proceedings of the first international symposium surveys the current status of nonparametric theory It contains thirty five papers with discussions by some of the world s most eminent authorities in the field The subjects discussed are testing and estimation order statistics and allied problems ranking and selection procedures general theory problems relating to goodness of fit decision theoretic and empirical Bayes procedures and nonparametric methods and elementary
