Nonionizing Radiation Protection:

Non-ionizing Radiation Protection Andrew W. Wood, Ken Karipidis, 2017-04-10 A comprehensive review of non ionizing radiation and its public health and environmental risks for researchers policy makers and laymen This book explains the characteristics of all forms of electromagnetic non ionizing radiation NIR and analyzes the relationship between exposure and its biological effects as well as the known dose response relationships associated with each Taking a uniquely holistic approach to the concept of health that builds upon the WHO definition to include not only absence of disease but the physical mental and social well being of individuals and the population it reviews established and potential risks and protections along with regulatory issues associated with each The risks to public health of NIR whether in the form of UV light radio waves from wireless devices or electric and magnetic fields associated with electrical power systems is currently a cause of great concern among members of the public and lawmakers But in order to separate established science from speculation and make informed decisions about how to mitigate the risks of NIR and allocate precious resources policymakers manufacturers and individuals need a comprehensive source of up to date information based on the current scientific evidence Written by a team of experts in their fields this book is that source Among other things it Summarizes scientific findings on the safety of different forms of NIR and the rationale behind current standards Describes devices for monitoring NIR along with the established and potential hazards of each form Explores proper protections against UV light and lasers RF radiation ELF fields and other forms of NIR Discusses how to avoid injuries through occupational training or public awareness programs and how to perform medical assessments in cases of suspected NIR injuries Considers how to decide whether or not to spend money on certain mitigation measures based on cost benefit analyses Offering expert reviews and analyses of the latest scientific findings and public policy issues concerning the risks to public health and the environment of NIR *Non ionizing Radiation Protection* is an indispensable source of information for manufacturers government regulators and regulatory agencies as well as researchers concerned laypersons and students

Nonionizing Radiation Protection Michael J. Suess, 1982 One of the newer environmental hazards is nonionizing radiation NIR which may lead to adverse effects on human health Exposure to NIR extends from occupational health right into the field of public health When considering exposure limits and setting up control programmes the heterogeneity of the population to be protected has to be kept in mind Possible genetic and carcinogenic effects as well as effects on development have all to be carefully considered and are of prime importance in protecting the public Therefore one of the major efforts within the radiation sector of the programme during these years was directed towards the development of this book which I now introduce with pleasure to a broad professional audience This publication represents the results of the collaborative effort of over 200 experts from 20 countries

particles and electromagnetic waves at the beginning of the text thus integrating coverage of ionizing and nonionizing radiation rather than considering them as two separate disciplines He goes on to cover the entire spectrum of radiation sources including radionuclides x ray machines accelerators nuclear reactors power lines microwave towers and cellular phones With its expanded coverage including a broader focus on public health issues this new volume will serve as an important training and reference resource not only for research scientists physicians and engineers but for regulatory officials attorneys engineers and environmental health and safety professionals The breadth of citations alone makes this resource invaluable
