Equations Reinhard Racke,2013-06-29 The book in hand is based on lectures which were given at the University of Bonn in the winter semesters of 1989 90 and 1990 91 The aim of the lectures was to present an elementary self contained introduction into some important aspects of the theory of global small smooth solutions to initial value problems for non linear evolution equa tions The addressed audience included graduate students of both mathematics and physics who were only assumed to have abasie knowledge of linear partial differential equations Thus in the spirit of the underlying series this book is intended to serve as a detailed basis for lectures on the subject as weIl as for self studies for students or for other newcomers to this field The presentation of the theory is made using the classical method of continuation of local solutions with the help of apriori estimates obtained for small data The corre sponding global existence theorems have been proved mainly in the last decade focussing on fully nonlinear systems Related questions concerning large data problems the ex istence of weak solutions or the analysis of hock waves are not discussed Also the question of optimal regularity assumptions on the coefficients is beyond the scope of the book and is touched only in part and exemplarily **Nonlinear Evolution Equations and Dynamical Systems** Sandra Carillo,Orlando Ragnisco,2012-12-06 Nonlinear Evolution Equations and Dynamical Systems NEEDS provides a presentation of the state of the art Except for a few review papers the 40 contributions are intentialy brief to give only the gist of the methods proofs etc including references to the relevant litera ture This gives a handy overview of current research activities Hence the book should be equally useful to the senior resercher as well as the colleague just entering the field Keypoints treated are i integrable systems in multidimensions and associated phenomenology dromions ii criteria and tests of integrability e g Painlev test iii new developments related to the scattering transform iv algebraic approaches to integrable systems and Hamiltonian theory e g connections with Young Baxter equations and Kac Moody algebras v new developments in mappings and cellular automata vi applications to general relativity condensed matter physics and oceanography *Nonlinear Evolution Equations and Potential Theory* J.
