## **Nonlinear Evolutions:**

Compactness Methods for Nonlinear Evolutions Ioan I Vrabie,1995-07-24 This monograph provides a self contained and comprehensive account of the most significant existence results obtained over the past two decades referring to some remarkable classes of ill posed problems governed by non accretive operators All the results are derived from several compactness arguments due mainly to the author and are suitably illustrated by examples arising from various concrete problems for example nonlinear diffusion heat conduction in materials with memory fluid dynamics and vibrations of a string with memory Reference is made to optimal control theory in order to emphasize the degree of applicability of abstract compactness methods Special attention is paid to multivalued perturbations of m accretive operators this case is analyzed under appropriate assumptions in order to allow the use of the general results in the study of some specific problems of great practical interest reaction diffusion and closed loop systems Some biographical comments and open problems are also included This new edition contains a number of improvements corrections and insertions which both simplify and update the material The book will be of interest to graduate students and specialists working in abstract evolution equations partial differential equations reaction diffusion systems and ill posed problems A knowledge of topology functional analysis and ordinary differential equations to undergraduate level is assumed

*Nonlinear Functional Evolutions in Banach Spaces* Ki Sik Ha,2013-04-17 There are many problems in nonlinear partial differential equations with delay which arise from for example physical models biochemical models and social models Some of them can be formulated as nonlinear functional evolutions in infinite dimensional abstract spaces Since Webb 1976 considered autonomous nonlinear functional evolutions in infinite dimensional real Hilbert spaces many nonlinear analysts have studied for the last nearly three decades autonomous nonlinear functional evolutions non autonomous nonlinear functional evolutions and quasi nonlinear functional evolutions in infinite dimensional real Banach spaces The techniques developed for nonlinear evolutions in infinite dimensional real Banach spaces are applied This book gives a detailed account of the recent state of theory of nonlinear functional evolutions associated with accretive operators in infinite dimensional real Banach spaces Existence uniqueness and stability for solutions of nonlinear functional evolutions are considered Solutions are presented by nonlinear semigroups or evolution operators or methods of lines or inequalities by Benilan This book is divided into four chapters Chapter 1 contains some basic concepts and results in the theory of nonlinear operators and nonlinear evolutions in real Banach spaces that play very important roles in the following three chapters Chapter 2 deals with autonomous nonlinear functional evolutions in infinite dimensional real Banach spaces Chapter 3 is devoted to non autonomous nonlinear functional evolutions in infinite dimensional real Banach spaces Finally in Chapter 4 quasi nonlinear functional evolutions are considered in infinite dimensional real Banach spaces

## **Delay Differential Evolutions Subjected to Nonlocal Initial Conditions**

Monica-Dana Burlică, Mihai Necula, Daniela Roșu, Ioan I. Vrabie, 2018-09-03 Filling a gap in the literature Delay Differential

Evolutions Subjected to Nonlocal Initial Conditions reveals important results on ordinary differential equations ODEs and partial differential equations PDEs. It presents very recent results relating to the existence, boundedness, regularity and asymptotic behavior of global solutions for differential equations and inclusions with or without delay subjected to nonlocal implicit initial conditions. After preliminaries on nonlinear evolution equations governed by dissipative operators, the book gives a thorough study of the existence, uniqueness and asymptotic behavior of global bounded solutions for differential equations with delay and local initial conditions. It then focuses on two important nonlocal cases: autonomous and quasi-autonomous. The authors next discuss sufficient conditions for the existence of almost periodic solutions, describe evolution systems with delay and nonlocal initial conditions, examine delay evolution inclusions and extend some results to the multivalued case of reaction-diffusion systems. The book concludes with results on viability for nonlocal evolution inclusions.

**Beyond Nonstructural Quantitative Analysis** Yong Wu, Yi Lin, 2002. This book summarizes the main scientific achievements of the blown up theory of evolution science, which was first seen in published form in 1994. It explores using the viewpoint and methodology of the blown up theory possible generalizations of Newtonian particle mechanics and computational schemes developed on Newton's and Leibniz's calculus as well as the scientific systems and the corresponding epistemological propositions introduced and polished in the past three hundred years. The authors briefly explain the fundamental concepts, then analyze a series of topics and problems of the current active research widely carried out in the natural sciences. Along the lines of the analyses, they introduce new points of view and the corresponding methods. Also, they point out that the blown up theory originated from the idea of mutual slavings of materials' structures so that numbers are transformed into forms. This discovery reveals that nonlinearity is not a problem solvable in the first push system and that the materials' property of rotation is not only an epistemology but also a methodology. The authors then point to the fact that nonlinearity is a second stir of mutual slavings of materials.

*Nonlinear Evolution Equations and Related Topics* Wolfgang Arendt, Haim Brezis, Michel Pierre, 2004-08-20. Philippe B. Benilan was a most original and charismatic mathematician who had a deep and decisive impact on the theory of Nonlinear Evolution Equations. Dedicated to him, *Nonlinear Evolution Equations and Related Topics* contains research papers written by highly distinguished mathematicians. They are all related to Philippe Benilan's work and reflect the present state of this most active field. The contributions cover a wide range of nonlinear and linear equations.
