## **Nonlinear Problems In Random Theory:**

*Nonlinear Problems in Random Theory* Norbert Wiener, 1958 A series of lectures on the role of nonlinear processes in physics mathematics electrical engineering physiology and communication theory From the preface For some time I have been interested in a group of phenomena depending upon random processes One the one hand I have recorded the random shot effect as a suitable input for testing nonlinear circuits On the other hand for some of the work that Professor W A Rosenblith and I have been doing concerning the nature of the electroencephalogram and in particular of the alpha rhythm it has occurred to me to use the model of a system of random nonlinear oscillators excited by a random input At the beginning we had contemplated a series of only four or five lectures My ideas developed pari passu with the course and by the end of the term we found ourselves with a set of fifteen lectures The last few of these were devoted to the application of my ideas to problems in the statistical mechanics of gases This work is both new and tentative and I found that I had to supplement my course by the writing over of these with the help of Professor Y W Lee
