Normal Microflora:

Normal Microflora Gerald W. Tannock,1995 This book is about the microbial species that inhabit the human body and the consequences of the intimate relationships that we share with them It is intended that the book will provide an introduction to the normal microflora for those studying disciplines within the health sciences and for those in the food industry where interest in the microbiology of the digestive tract especially with respect to lactic acid bacteria is topical

Medical Importance of the Normal Microflora Gerald W. Tannock,2012-12-06 It has been estimated that there are more microbial cells inhabiting the human body than there are eukaryotic cells of which it is made up This normal microflora usually co exists relatively peacefully with the host and does not cause infection The mechanisms by which this co existence is achieved are still not properly understood and the interaction between the normal microflora and the host is far from simple For a variety of reasons however this interaction can be disturbed and often results in the microflora becoming pathogens The study of the diseases then caused is important both in terms of treatment and in terms of contributing to our understanding of the mechanisms by which the normal microflora usually interacts with the host This title brings together an international list of contributors all of whom have active research interests in the normal microflora Each of the chapters reviews current knowledge about a specific group or organism within the microflora and the diseases they can cause Microflora of the skin respiratory tract oral cavity gastrointestinal system and genital tract are all discussed and the impact of molecular methods on our understanding of the normal microflora is emphasised throughout the book Medical microbiologists dental specialists infectious disease specialists nutritionists and gastroenterologists will all find this book of immense interest and value as will epidemiologists dermatologists and general microbiologists Microbiology Daniel V.

The Lactic Acid Bacteria: Volume 1 B.J.B. Wood, 1992-07-23 Historical Background I owe my interest in the lactic acid bacteria LAB to the late Dr Cyril Rainbow who introduced me to their fascinating world when he offered me a place with him to work for a PhD on the carbohydrate metabolism of some lactic rods isolated from English beer breweries by himself and others notably Dr Dora Kulka He was particularly interested in their preference for maltose over glucose as a source of carbohydrate for growth expressed in most cases as a more rapid growth on the disaccharide but one isolate would grow only on maltose

Eventually we showed that maltose was being utilised by direct fermentation as the older texts called it specifically by the phosphorolysis which had first been demonstrated for maltose by Doudoroff and his associates in their work on maltose metabolism by a strain of *Neisseria meningitidis* I began work on food fermentations when I came to Strathclyde University and I soon found myself involved again with the bacteria which I had not touched since completing my doctoral thesis In 1973 IG Carr C V Cutting and G c Whiting organised the 4th Long Ashton Symposium Lactic Acid Bacteria in Beverages and Food and from my participation in that excellent conference arose a friendship with Geoff Carr The growing importance of these bacteria was subsequently confirmed by the holding a decade later of the first of the Wageningen Conferences on the LAB **Industrial Microbiology** Henry Field Smyth, Walter Lord Obold, 1930 **Illinois Horticulture** , 1922
