## Normal Language Acquisition:

**Milestones** John W. Oller, Stephen D. Oller, Stacy N. Oller, 2012-12-20      Normal Language Acquisition Sharon L. James, 1990      **Language Development In Exceptional Circumstances** Dorothy Bishop, K. Mogford, 2013-04-15 Ever since attempts were made to describe and explain normal language development references to exceptional circumstances have been made. Variations in the conditions under which language is acquired can be regarded as natural experiments which would not be feasible or ethical under normal circumstances. This can throw light on such questions as: What language input is necessary for the child to learn language? What is the relationship between cognition and language? How independent are different components of language function? Are there critical periods for language development? Can we specify necessary and sufficient conditions for language impairment? This book covers a range of exceptional circumstances including extreme deprivation, twinship, visual and auditory impairments, autism and focal brain damage. Written in a jargon free style and including a glossary of linguistic and medical terminology, the book assumes little specialist knowledge. This text is suitable for both students and practitioners in the fields of psycholinguistics, developmental and educational psychology, speech pathology, paediatrics and special education.

**Language Acquisition** Jill G. De Villiers, Peter A. De Villiers, 1978 The study of language acquisition has become a center of scientific inquiry into the nature of the human mind. The result is a windfall of new information about language, about learning and about children themselves. In **Language Acquisition** Jill and Peter de Villiers provide a lively introduction to this fast growing field. Their book deals centrally with the way the child acquires the sounds, meanings and syntax of his language and the way he learns to use his language to communicate with others. In discussing these issues the de Villiers provide a clear and insightful treatment of the classic questions about language acquisition: Does the child show a genetic predisposition for speech or grammar or semantics which makes him uniquely able to learn human language? What kinds of learning are involved in acquiring language and what kinds of experience with a language are necessary to support such learning? Is there a critical period during the child's development which is optimal for language acquisition? And what kind of psychological disabilities underlie the failure to acquire language?

**Impaired Language Acquisition** Silke Lübbert, 2007-05-18 Seminar paper from the year 2006 in the subject English Language and Literature Studies Linguistics grade 1 7 University of Paderborn Anglistik course Psycolinguistics language English abstract. Language is a major communicative device. Human beings communicate via different language systems like for instance sign languages, verbal languages and written languages. This paper will deal with the acquisition of the verbal language or more accurate certain problems which can occur during the process of acquisition. Almost every human being acquires one or more languages during his life. The general schedule of acquisition can be considered to be the same for all languages and all human beings. Learners of different languages and different age create the same errors. However this process of acquisition does not always follow the same pattern. There are instances in which the process is distracted due to certain problems. Some

children suffer from brain damages which prevent them from learning a language properly while other children have hearing problems which result as well in problems with the acquisition of a language Furthermore there exists a group of children which have no obvious physically problems like brain damages or hearing problems but they are delayed or impaired concerning the process of language acquisition This group of children is within the focus of this paper because their development as well as the treatment of their impairment is most challenging for researchers and medical doctors To show the problems that can occur in an acquisition process the first part of this paper will outline the normal process of language acquisition which almost all children pass through This serves the purpose to show the contrasts between a normal language development and an impaired development After this short outline the general concept of language impairment will be described before dealing with the concept of Specific Language Impairment SLI This concept will be described in more detail before showing the different specifications in which the SLI can occur These specifications will be illustrated through examples that sow the contrasts and similarities between children with and without problems in the language acquisition The Conclusion will present a short summary of the presented issues as well as results of recent research concerning the treatment of SLI

**The Social and Cognitive Aspects of Normal and Atypical Language Development** Stephen v. Tetzchner,Linda S. Siegel,Lars Smith,2012-12-06 For some time now the study of cognitive development has been far and away the most active discipline within developmental psychology Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive 50% seems like a conservative estimate Hence a series of scholarly books devoted to work in cognitive development is especially appropriate at this time The Springer Series in Cognitive Development contains two basic types of books namely edited collections of original chapters by several authors and original volumes written by one author or a small group of authors The flagship for the Springer Series is a serial publication of the advances type carrying the subtitle Progress in Cognitive Development Research Each volume in the Progress sequence is strongly thematic in that it is limited to some well defined domain of cognitive developmental research e g logical and mathematical development development of learning All Progress volumes will be

edited collections Editors of such collections upon consultation with the Series Editor may elect to have their books published either as contributions to the Progress sequence or as separate volumes All books written by one author or a small group of authors are being published as separate volumes within the series

**Neurodevelopmental Outcomes of Preterm Birth** Chiara Nosarti,Robin M. Murray,Maureen

Hack,2010-04-08 The improved survival of very preterm and very low birth weight infants in recent decades has been associated with an increase in the prevalence of physical and neurodevelopmental problems. Attention is increasingly being focused on the quality of life of survivors who are at greater risk of brain damage and consequent neurological disorders and neuropsychological and behavioural impairments. In this volume leading experts present a comprehensive and up to date perspective on research in various aspects of the long term consequences of very preterm birth. As well as extending existing knowledge of the neurodevelopmental sequelae following very preterm birth a shared aim of this burgeoning body of research is to identify the mechanisms underlying variations in outcome and thus recognise subgroups of children who are at increased risk of neurodevelopmental problems for whom appropriate intervention strategies can be devised. Pediatricians, neurologists, psychiatrists and psychologists will all find this to be essential reading.

**The Language Acquisition of Twins and Twin Language** Mieke Schüller, 2007-02-08 Seminar paper from the year 2002 in the subject American Studies Linguistics grade 2 0 Johannes Gutenberg University Mainz Seminar f r Englische Philologie course Language Acquisition in its Developmental Context language English abstract The examination of language acquisition is an interesting field of linguistic research no matter whether primary language acquisition of children or second language acquisition of adults is concerned In general the ability to comprehend language and to communicate verbally is a defining aspect of the human being in principle the ability to acquire language and the will to communicate is present in every human child Verbal communication is basic to human social interaction Moreover the study of language acquisition offers an insight into the operations of the human mind according to the progression and pace of the language acquisition the linguistic researchers can draw their own conclusions from the observations Definitely linguistics is an interesting scientific research field which has not been fully examined up to now Although linguistic researchers have done various studies on the acquisition of language and on speech impediments there are still many linguistic peculiarities that cannot be explained thus far During my research on the topic of primary language acquisition of children I now and again came across a short remark or even a short chapter that commented on the peculiarities of the language development of twins Further on I learned about the phenomenon of twin language often referred to as idioglossia Since these hints aroused my interest I decided to write my research paper on the topic of the language acquisition of twins and on idioglossia With regard to linguistic research on the processes of language acquisition twins offer an interesting approach because their language development is reported to be different from the language development of same age singletons In order to prove this thesis it might be helpful to provide a short introduction to what is considered normal language development for children aged between about three months to about five years Accordingly the way in which the language acquisition of twins differs from the norm will be described Of course the fact that there are differences begs questions What might be biological reasons for the delay If compared to singletons what are the differences in the twins bringing up or in their interaction with the parents There are diverse attempts to explain the speech disorders of twins so the fourth chapter of this research paper is devoted to the explanations for the delayed development with regard to the biological and social factors
