Moving Targets:

Optimal Search for Moving Targets Lawrence D. Stone, Johannes O. Royset, Alan R. Washburn, 2016-04-06 This book begins with a review of basic results in optimal search for a stationary target. It then develops the theory of optimal search for a moving target, providing algorithms for computing optimal plans and examples of their use. Next it develops methods for computing optimal search plans involving multiple targets and multiple searchers with realistic operational constraints on search movement. These results assume that the target does not react to the search. In the final chapter there is a brief overview of mostly military problems where the target tries to avoid being found as well as rescue or rendezvous problems where the target and the searcher cooperate. Larry Stone wrote his definitive book *Theory of Optimal Search* in 1975 dealing almost exclusively with the stationary target search problem. Since then the theory has advanced to encompass search for targets that move even as the search proceeds and computers have developed sufficient capability to employ the improved theory. In this book Stone joins Royset and Washburn to document and explain this expanded theory of search. The problem of how to search for moving targets arises every day in military rescue, law enforcement and border patrol operations.

Moving Targets: Understanding Our Changing Landscapes Theresa Valko, Brad Sietz, 2008 DDC Retrieval and Indexing Terminology Defense Documentation Center (U.S.), 1975 Moving Targets Scott Douglas Sagan, 2020-11-10 In what Stanley Hoffmann writing in *The New York Review of Books* has called a fine analysis and critique of American targeting policies, Sagan looks more at the operational side of nuclear strategy than previous analysts have done seeking to bridge the gap between theory and practice.

Due to this mobility, targeting information is transient in nature, lasting only hours or even minutes. This makes moving targets hard to engage. In the recent past, by the time the target was acquired, identified and targeted, it had relocated, making engagement unproductive. Information technologies, network centric and sensor to shooter concepts are making this sequence of actions faster and making it viable now to target these time critical moving targets.
