Modeling And Simulation For Rf System Design:

Modeling and Simulation for RF System Design Ronny Frevert, Joachim Haase, Roland Jancke, Uwe Knochel, Peter Schwarz, Ralf Kakerow, Mohsen Darianian, 2006-06-28 Modern telecommunication systems are highly complex from an algorithmic point of view. The complexity continues to increase due to advanced modulation schemes, multiple protocols and standards as well as additional functionality such as personal organizers or navigation aids. To have short and reliable design cycles, efficient verification methods and tools are necessary. Modeling and simulation need to accompany the design steps from the specification to the overall system verification in order to bridge the gaps between system specification, system simulation and circuit level simulation. Very high carrier frequencies together with long observation periods result in extremely large computation times and requires therefore specialized modeling methods and simulation tools on all design levels. The focus of Modeling and Simulation for RF System Design lies on RF specific modeling and simulation methods and the consideration of system and circuit level descriptions. It contains application oriented training material for RF designers which combines the presentation of a mixed signal design flow, an introduction into the powerful standardized hardware description languages VHDL-AMS and Verilog-A and the application of commercially available simulators. Modeling and Simulation for RF System Design is addressed to graduate students and industrial professionals who are engaged in communication system design and want to gain insight into the system structure by own simulation experiences. The authors are experts in design modeling and simulation of communication systems engaged at the Nokia Research Center Bochum, Germany and the Fraunhofer Institute for Integrated Circuits Branch Lab Design Automation Dresden, Germany.
