### Abstract

The logic of signed formula can be used to reason about a wide variety of multiple-valued logics [Häh94b, LMR97]. The formal theoretical foundation of multiple-valued logic programming based on signed formulas is set forth in [Lu96]. The current paper is an investigation into the operational semantics of such signed logic programming. The connection of signed logic programming to constraint logic programming is presented, search space issues are briefly discussed for both general and special cases, and applications to bilattice logic programming and truth-maintenance are analyzed.

**Keywords:** Logic for Artificial Intelligence, Multiple-valued Logic, Signed Formula, Constraint Logic Programming, Truth-Maintenance, Bilattices.

## 1 Introduction

The logic of signed formulas facilitates the examination of questions regarding multiple-valued logics through classical logic. As such, logic programming based on signed formulas also facilitates the analysis of multiple-valued logic programming systems through classical logic programming. The theoretical foundation and the applications of the logic of signed formulas have been investigated extensively [Häh91, Häh94a, LMR97, MR94]. On the other hand, logic programming based on signed formulas — signed formula logic programming — is only formalized recently [Lu96]. There, the semantical connections between a signed formula logic program and its associated underlying multiple-valued logic program are studied. In addition, the relationships between signed formula logic programming and the class of annotated logic programming [BS89, KS92] are established. It is shown
