Multiple-Target Tracking with Radar Applications Samuel S. Blackman, 1986-01-01      Multiple-target Tracking with Radar Applications Samuel S. Blackman, 1986      *Multiple Target Tracker and Human Classifier for Radar Application* Jonathan J. Preussner, 2005 ABSTRACT Human classification is a valuable tactical tool for military and security applications Multiple target tracking is inherent to target classification in the radar system A target tracker is designed in Matlab It uses a simplified Kalman filter to predict range and velocities for multiple targets Multiple target tracking allows several targets to be tracked and classified simultaneously The thesis research addresses the design and implementation of human classifiers The classification algorithms all use Spectrogram data to classify targets The Fourier transform method classifies human targets by the periodic motions of human gait Emphasis will be placed on optimizing the algorithm for implementation in a digital signal processor Determining targets angles of incidence is also discussed Additional improvements in the application of this classifier are made to reduce the required computational and storage resources A template matching algorithm is also researched The template matching method uses previously recorded sets of data to classify targets This algorithm will be designed for near real time classification of human and non human targets All classification methods require multiple target tracking to generate Spectrograms for classification      **Group-target Tracking** Wen-dong Geng, Yuan-qin Wang, Zheng-hong Dong, 2016-10-01 This book describes grouping detection and initiation group initiation algorithm based on geometry center data association and track continuity as well as separate detection and situation cognition for group target It specifies the tracking of the target in different quantities and densities At the same time it integrates cognition into the application Group target Tracking is designed as a book for advanced level students and researchers in the area of radar systems information fusion of multi sensors and electronic countermeasures It is also a valuable reference resource for professionals working in this field      *Multi-Sensor Data Fusion with MATLAB* Jitendra R. Rao, 2009-12-16 Using MATLAB examples wherever possible Multi Sensor Data Fusion with MATLAB explores the three levels of multi sensor data fusion MSDF kinematic level fusion including the theory of DF fuzzy logic and decision fusion and pixel and feature level image fusion The authors elucidate DF strategies algorithms and performance evaluation mainly      *Optimal Estimation and Information Fusion: Theory and Algorithms* Ming Lei, 2025-08-25 This book mainly focuses on the theme of optimizing estimation and sensor information fusion processing for stochastic dynamic systems It summarizes the basic theories and methods of optimizing estimation and information fusion direction including stochastic system models optimal estimation methods linear state estimation nonlinear state estimation information fusion models structures data processing methods data association based on multi source data estimation and other aspects On the basis of years of teaching practice the author optimizes the content layout focuses on the basic theoretical methods of the subject emphasizes the systematic nature of the theory and the rigor of expression selectively cuts out some outdated content and

introduces some important and widely accepted new developments in the subject On the other hand this book also serves as a reference material for technical developers in this field *Applied State Estimation and Association* Chaw-Bing Chang, Keh-Ping Dunn, 2016-07-08 A rigorous introduction to the theory and applications of state estimation and association an important area in aerospace electronics and defense industries Applied state estimation and association is an important area for practicing engineers in aerospace electronics and defense industries used in such tasks as signal processing tracking and navigation This book offers a rigorous introduction to both theory and application of state estimation and association It takes a unified approach to problem formulation and solution development that helps students and junior engineers build a sound theoretical foundation for their work and develop skills and tools for practical applications Chapters 1 through 6 focus on solving the problem of estimation with a single sensor observing a single object and cover such topics as parameter estimation state estimation for linear and nonlinear systems and multiple model estimation algorithms Chapters 7 through 10 expand the discussion to consider multiple sensors and multiple objects The book can be used in a first year graduate course in control or system engineering or as a reference for professionals Each chapter ends with problems that will help readers to develop derivation skills that can be applied to new problems and to build computer models that offer a useful set of tools for problem solving Readers must be familiar with state variable representation of systems and basic probability theory including random and stochastic processes **Multi-sensor Multi-target Data Fusion, Tracking and Identification Techniques for Guidance and Control Applications**, 1996 Resum p fransk *Signal Processing, Sensor Fusion, and Target Recognition*, 1999 *Compressive Sensing of Earth Observations* C.H. Chen, 2017-05-25 Future remote sensing systems will make extensive use of Compressive Sensing CS as it becomes more integrated into the system design with increased high resolution sensor developments and the rising earth observation data generated each year Written by leading experts in the field *Compressive Sensing of Earth Observations* provides a comprehensive and balanced coverage of the theory and applications of CS in all aspects of earth observations This work covers a myriad of practical aspects such as the use of CS in detection of human vital signs in a cluttered environment and the corresponding modeling of rib cage breathing Readers are also presented with three different applications of CS to the ISAR imaging problem which includes image reconstruction from compressed data resolution enhancement and image reconstruction from incomplete data *Design and Analysis of Modern Tracking Systems* Samuel S. Blackman, Robert Popoli, 1999 Here s a thorough overview of the state of the art in design and implementation of advanced tracking for single and multiple sensor systems This practical resource provides modern system designers and analysts with in depth evaluations of sensor management kinematic and attribute data processing data association situation assessment and modern tracking and data fusion methods as applied in both military and non military arenas **The 1996 IEEE International Conference on Neural Networks, June 3-6, 1996, Sheraton Washington Hotel, Washington, DC, USA.: Proceedings**, 1996 *Selected Papers on Sensor and Data Fusion*
