Multidimensional Programming:

   Multidimensional Programming Edward A. Ashcroft,1995 This book describes a powerful language for multidimensional declarative programming called Lucid Lucid has evolved considerably in the past ten years The main catalyst for this metamorphosis was the discovery that Lucid is based on intensional logic one commonly used in studying natural languages Intensionality and more specifically indexicality has enabled Lucid to implicitly express multidimensional objects that change a fundamental capability with several consequences which are explored in this book The author covers a broad range of topics from foundations to applications and from implementations to implications The role of intensional logic in Lucid as well as its consequences for programming in general is discussed The syntax and mathematical semantics of the language are given and its ability to be used as a formal system for transformation and verification is presented The use of Lucid in both multidimensional applications programming and software systems construction such as a parallel programming system and a visual programming system is described A novel model of multidimensional computation education is described along with its serendipitous practical benefits for harnessing parallelism and tolerating faults As the only volume that reflects the advances over the past decade this work will be of great interest to researchers and advanced students involved with declarative language systems and programming   **Understanding Ecological Programming** Susan Scherffiu Jakes,Craig Brookins,2004-07-12 Increase the effectiveness of prevention programs by altering community and social settings Understanding Ecological Programming Merging Theory Research and Practice contains vital information to help you become a better community based program designer using ecological programming Focused on the basic concept of the ecological progra   **Encyclopedia of Optimization** Christodoulos A.
