Summers,2012-12-06 The Environmental Monitoring and Assessment Program was created by EPA to develop the capability for tracking the changing conditions of our natural resources and to give environmental policy the advantages of a sound scientific understanding of trends Former EPA Administrators recognized early that contemporary monitoring programs could not even quantify simple unknowns like the number of lakes suffering from acid rain let along determine if national control policies were benefiting these lakes Today adding to acidification impacts are truly complex problems such as determining the effects of climate change of increases in ultraviolet light toxic chemicals eutrophication and critical habitat loss Also today the Government Performance and Results Act seeks to have agencies develop performance standards based on results rather than simply on levels of programmatic activities The charge to EMAP of ecosystems is therefore the same today as it was a with respect to measuring the condition decade ago We welcome the increasing urgency for sound scientific monitoring methods and data by efforts to protect and improve the environment Systematic nationwide monitoring of natural resources is more than anyone program can accomplish however In an era of declining budgets it is crucial that monitoring programs at all levels of government coordinate and share environmental data EMAP resources are dwarfed by the more than 500 million spent on federal monitoring activities each year

Baillie,Sarah M. Durant,2013-05-06 As the impacts of anthropogenic activities increase in both magnitude and extent biodiversity is coming under increasing pressure Scientists and policy makers are frequently hampered by a lack of information on biological systems particularly information relating to long term trends Such information is crucial to developing an understanding as to how biodiversity may respond to global environmental change Knowledge gaps make it very difficult to develop effective policies and legislation to reduce and reverse biodiversity loss This book explores the gap between global commitments to biodiversity conservation and local action to track biodiversity change and implement conservation action High profile international political commitments to improve biodiversity conservation such as the targets set by the Convention on Biological Diversity require innovative and rapid responses from both science and policy This multi disciplinary perspective highlights barriers to conservation and offers novel solutions to evaluating trends in biodiversity at multiple scales
