### **The Realities of Reality - Part II: Making Sense of Why**

**Modern Science Advances (Volume 1)** Fritz Dufour, MBA, DESS, 2018-09-19 This Volume 1 of Part II considers the factors that make science progress. It lays out the differences between normal science and pseudoscience by showing the importance of the scientific method in the advancement of science. It introduces the concept of Truth in science by raising the point that even though truth is based on the scientific method can science be true? Can it depict reality? The author focuses on modern science which he thinks was born thanks to the Scientific Revolution which started with Galileo Galilei and led to the Industrial Revolution. The impacts of the latter are analyzed in light of modernism, modernization, and modernity, all three linked to scientific progress. The book also talks about the Newtonian scientific leap by analyzing particularly the then social and political fabrics of England and Albert Einstein by showing how he changed history. According to the author, our very physical world can help us understand scientific progress. So he explains among other things the structure of atoms and molecules, the role of physics in the understanding of our universe, Quantum Mechanics, and the importance of Higgs Boson. On the other hand, the book is a stunning revelation of how important information is to scientific progress. To make his point, the author first talks about John Vincent Atanasoff as the Father of computer thanks to the invention of his ABC computer and then Alan Turing as the Father of modern computer thanks to his Turing Test and his views on Artificial Intelligence. Both men played a momentous role in the Digital Revolution and in the Information Age according to the book. Finally, the author talks about nanotechnology which explores the world of small meaning at the atomic and the molecular levels and is an inescapable tool in the molecular biology revolution which itself is an important factor in scientific progress and in transhumanism or human enhancement defined as the ideology according to which man can surpass his present state by improving his genetic material.

**Pomona College Magazine**, 1930 *Educating the next generation of scientists* Great Britain: Parliament: House of Commons: Committee of Public Accounts, 2011-01-20 A strong supply of people with science, technology, engineering, and maths skills is important for the UK to compete internationally. The starting point is a good education for children and young people in science and maths. The numbers studying separate GCSE biology, chemistry, and physics, known as Triple Science, when studied together, have risen by almost 150% between 2004/05 and 2009/10. Attainment has also improved as take-up has increased. Nevertheless, there is a risk that this progress will not be maintained. There are still not enough teachers with strong subject knowledge in science and maths entering the profession. In 2009/10, there were over 115 000 entries to GCSE biology, 113 000 to chemistry, and 112 000 to physics. Another 40 000 pupils entered A level chemistry and almost 70 000 A level maths. If the higher numbers of pupils taking science and maths are to achieve good results, they need to be taught by teachers with the specialist knowledge to teach these subjects well. Teaching environments are also vitally important in improving take-up and achievement in science, but there is evidence that science facilities in many schools are unsatisfactory.

and even unsafe Furthermore in some schools advice and guidance on science and maths related careers is poor The Department must approach the challenge of improving school science and maths through a coherent system wide strategy rather than as a number of initiatives operating in isolation As more autonomy is given to schools the Department must develop an accountability framework that gives schools strong incentives to put all key elements in place for the benefit of their pupils *Claiming the Heavens* Philip M.
