Next Wave In Computing Optimization And Decision Technologies:

The Next Wave in Computing, Optimization, and Decision Technologies Bruce L. Golden, S. Raghavan, Edward A. Wasil, 2006-10-13 Computer Science and Operations Research continue to have a synergistic relationship and this book represents the results of the cross fertilization between OR MS and CS AI It is this interface of OR CS that makes possible advances that could not have been achieved in isolation Taken collectively these articles are indicative of the state of the art in the interface between OR MS and CS AI and of the high caliber research being conducted by members of the INFORMS Computing Society *Graphs, Dioids and Semirings* Michel Gondran, Michel Minoux, 2008-05-14 The primary objective of this essential text is to emphasize the deep relations existing between the semiring and dioid structures with graphs and their combinatorial properties It does so at the same time as demonstrating the modeling and problem solving flexibility of these structures In addition the book provides an extensive overview of the mathematical properties employed by nonclassical algebraic structures which either extend usual algebra or form a new branch of it **Fleet Telematics** Asvin Goel, 2007-10-23 In the past 30 years commercial transport traffic has more than doubled in both Europe and North America while Asian traffic has likely increased even more As any mismatch between supply and demand can result into significant disturbances of manufacturing processes just in time practices necessitate punctual reliable and flexible transportation Fleet Telematics Real Time Management and Planning of Commercial Vehicle Operations combines wireless telematics systems with dynamic vehicle routing algorithms and vehicle positioning systems to produce a telematics enabled information system that can be employed by commercial fleet operators for real time monitoring control and planning The book presents a Messaging Fleet Monitoring System that automatically identifies deviations between the planned and the current state of the transportation system and a Dynamic Planning System DPS that provides real time decision support considering the current state of the transportation system *Dynamic Fleet Management* Vasileios S. Zeimpekis, Christos D. Tarantilis, George M. Giaglis, Ioannis E. Minis, 2007-10-05 Dynamic Fleet Management will focus on real time management of a distribution system This means that when a dynamic event occurs within the distribution chain action must be taken in real time The book will integrate the latest results in system design algorithm development and system implementation to capture the state of the art research and application trends While much of the research in this area of transportation problems have almost exclusively concentrated on carrying out static plans on optional distribution conditions this book will examine those problems when some dynamic or unplanned event occurs within the transport or network system It will focus specifically on these cases and integrate the latest results in systems routing algorithms and case studies where information a dynamic event is revealed to the decision maker in a real time manner *The Management of Transshipment Terminals* Dirk C. Mattfeld, 2006-06-01 1 1 Freight Transshipment We observe an ongoing trend towards globalized industrial production Multinational companies aim at strategic competitive advantages by distributing their activities around the globe As a result the individual supply chains

become longer and more complex Next to the supply chain reliability companies try to keep supply chains cost efficient and responsive i e warrant short order fulfillment lead times Siirie and Wagner 2005 The above goals dictate low inventory levels at the stages of a supply chain as well as a high frequency of transports between the partners involved Supply Chain Requirements Detailed performance measures for a supply chain are provided by the Supply Chain Operations Reference SCOR model Supply Chain Council 2002 The SCOR model provides four levels with increasing detail of process modeling In accordance to the process detail depicted SCOR metrics are defined for each level Level 1 distinguishes metrics addressing the reliability of supply chains their responsiveness flexibility cost and optionally their assets On levels 2 4 these metrics are operationalized with respect to the process types source make and deliver Thus as substantial activities of the deliver process transport and transshipment are evaluated as an integral part of the supply chain

Operations Research and Cyber-Infrastructure John W. Chinneck, Bjarni Kristjansson, Matthew J. Saltzman, 2009-01-05 Operations Research and Cyber Infrastructure is the companion volume to the Eleventh INFORMS Computing Society Conference ICS 2009 held in Charleston South Carolina from January 11 to 13 2009 It includes 24 high quality refereed research papers As always the focus of interest for ICS is the interface between Operations Research and Computer Science and the papers in this volume reflect that interest This is naturally an evolving area as computational power increases rapidly while decreasing in cost even more quickly and the papers included here illustrate the wide range of topics at this interface

Metaheuristic

Procedures for Training Neural Networks Enrique Alba, Rafael Martí, 2006-08-25 Metaheuristic Procedures For Training Neural Networks provides successful implementations of metaheuristic methods for neural network training Moreover the basic principles and fundamental ideas given in the book will allow the readers to create successful training methods on their own Apart from Chapter 1 which reviews classical training methods the chapters are divided into three main categories The first one is devoted to local search based methods including Simulated Annealing Tabu Search and Variable Neighborhood Search The second part of the book presents population based methods such as Estimation Distribution algorithms Scatter Search and Genetic Algorithms The third part covers other advanced techniques such as Ant Colony Optimization Co evolutionary methods GRASP and Memetic algorithms Overall the book s objective is engineered to provide a broad coverage of the concepts methods and tools of this important area of ANNs within the realm of continuous optimization

Perspectives in Operations Research Frank B. Alt, Michael C. Fu, Bruce L. Golden, 2006-12-26 A Symposium was held on February 25 2006 in honor of the 80th birthday of Saul I Gass and his major contributions to the field of operations research over 50 years This volume includes articles from each of the Symposium speakers plus 16 other articles from friends colleagues and former students Each contributor offers a forward looking perspective on the future development of the field

The Vehicle Routing Problem: Latest Advances and New Challenges Bruce L. Golden, S. Raghavan, Edward A. Wasil, 2008-07-20 Theoretical research and practical applications in the eld of vehicle routing started in 1959 with the truck

dispatching problem posed by Dantzig and Ramser 1 and the optimum routing of a fleet of gasoline delivery trucks between a bulk terminal and a large number of service stations supplied by the terminal Using a method based on a linear programming formulation their hand calculations produced a near optimal solution with four routes to a problem with twelve service stations The authors proclaimed No practical applications of the method have been made as yet In the nearly 50 years since the Dantzig and Ramser paper appeared work in the field has exploded dramatically Today a Google Scholar search of the words vehicle routing problem VRP yields more than 21 700 entries The June 2006 issue of OR MS Today provided a survey of 17 vendors of commercial routing software whose packages are currently capable of solving average size problems with 1 000 stops 50 routes and two hour hard time windows in two to ten minutes 2 In practice vehicle routing may be the single biggest success story in operations research For example each day 103 500 drivers at UPS follow computer generated routes The drivers visit 7 9 million customers and handle an average of 15 6 million packages 3

Cellular Genetic Algorithms Enrique Alba, Bernabe Dorronsoro, 2009-04-05 Cellular Genetic Algorithms defines a new class of optimization algorithms based on the concepts of structured populations and Genetic Algorithms GAs The authors explain and demonstrate the validity of these cellular genetic algorithms throughout the book with equal and parallel emphasis on both theory and practice This book is a key source for studying and designing cellular GAs as well as a self contained primary reference book for these algorithms

Schedule-Based Modeling of Transportation Networks Nigel H. M. Wilson, Agostino Nuzzolo, 2008-10-22 Schedule Based Modeling of Transportation Networks Theory and Applications follows the book Schedule Based Dynamic Transit Modeling published in this series in 2004 recognizing the critical role that schedules play in transportation systems Conceived for the simulation of transit systems in the last few years the schedule based approach has been expanded and applied to operational planning of other transportation schedule services besides mass transit e.g. freight transport This innovative approach allows forecasting the evolution over time of the on board loads on the services and their time varying performance using credible user behavioral hypotheses It opens new frontiers in transportation modeling to support network design timetable setting and investigation of congestion effects as well as the assessment of such new technologies such as users system information ITS technologies
