Hubbard,Peter Papadopol,2008 The authors study the Newton map N mathbb C 2 rightarrow mathbb C 2 associated to two equations in two unknowns as a dynamical system They focus on the first non trivial case two simultaneous quadratics to intersect two conics In the first two chapters the authors prove among other things The Russakovksi Shiffman measure does not change the points of indeterminancy The lines joining pairs of roots are invariant and the Julia set of the restriction of N to such a line has under appropriate circumstances an invariant manifold which shares features of a stable manifold and a center manifold The main part of the article concerns the behavior of N at infinity To compactify mathbb C 2 in such a way that N extends to the compactification the authors must take the projective limit of an infinite sequence of blow ups The simultaneous presence of points of indeterminancy and of critical curves forces the authors to define a new kind of blow up the Farey blow up This construction is studied in its own right in chapter 4 where they show among others that the real oriented blow up of the Farey blow up has a topological structure reminiscent of the invariant tori of the KAM theorem They also show that the cohomology completed under the intersection inner product is naturally isomorphic to the classical Sobolev space of functions with square integrable derivatives In chapter 5 the authors apply these results to the mapping N in a particular case which they generalize in chapter 6 to the intersection of any two conics   *Encyclopedia of Optimization* Christodoulos A. Floudas,Panos M. Pardalos,2008-09-04 The goal of the Encyclopedia of Optimization is to introduce the reader to a complete set of topics that show the spectrum of research the richness of ideas and the breadth of applications that has come from this field The second edition builds on the success of the former edition with more than 150 completely new entries designed to ensure that the reference addresses recent areas where optimization theories and techniques have advanced Particularly heavy attention resulted in health science and transportation with entries such as Algorithms for Genomics
