**Immunity** Ciba Foundation,1972      **Ciba Foundation Symposium 5 - Ontogeny of Acquiredimmunity** Ciba  
Foundation,      Immunity in Compromised Newborns Per T. Sangild,Duc Ninh Nguyen,Andrew Currie,Tobias  
Strunk,2021-09-14      **Avian Growth and Development** J. Matthias Starck,Robert E. Ricklefs,1998 This is the first re  
appraisal in 50 years of concepts of development made in birds This book is a case study in evolutionary diversification of life  
histories Although birds have a rather uniform body plan and physiology they exhibit marked variation in development type  
parental care and rate of growth Altricial birds are fully dependent on their parents for warmth and nutrition and begin  
posthatching life in a more or less embryonic condition At the other extreme such superprecocial species as the megapodes  
are independent of all parental care from hatching and the neonate able to fly resembles an adult bird This book thus  
attempts to present an integrative perspective of organism biology ecology and evolution      **The Ontogeny of Immunity**  
**in the Honey Bee, Apis Mellifera L.** Alice Martha Laughton,2008      Studies on the Ontogeny of the Mouse Immune  
System M. L. Tyan,1968 The presence of potential immunologically competent cells in the various tissues of embryonic  
newborn and adult mice was demonstrated by means of a modified graft vs host method and by the injection of  
chromosomally marked cells into irradiated recipients The results indicate that lymphoid stem cells which have the potential  
to participate in cell bound immune reactions appear in the placenta and liver by the 9th or 10th day of gestation Throughout  
pregnancy they are found in the liver During the 11th to 14th days of gestation these stem cells are present in the upper  
trunk or in the thymus On about the 15th day they appear in the lung and toward the end of the pregnancy in the fetal bone  
marrow and spleen There was little or no evidence of the presence of lymphoid precursors capable of maturation to cells  
which mediate cell bound immune responses in the gut prior to birth Following parturition lymphoid stem cells were present  
in the liver Peyer s patches lung bone marrow lymph nodes spleen blood and thymus However by six weeks after birth the  
bone marrow appeared to be the major or sole source of these cells Certain of the data suggest that immunoglobulin  
producing cells as opposed to those which mediate cell bound immunity may arise in the yolk sac on the 9th or 10th day of

gestation Further these immunoglobulin producing cells may reside in the gut as a relatively pure cell population after the 16th day of gestation Author Development of Host Defenses Max D.
