Strategic Operations Management Firdoos Quraishi, 2014-11-15 Operations management is an area of management
 concerned with overseeing designing and controlling the process of production and redesigning business operations in the
 production of goods or services It involves the responsibility of ensuring that business operations are efficient in terms of
 using as few resources as needed and effective in terms of meeting customer requirements It is concerned with managing
 the process that converts inputs in the forms of raw materials labor and energy into outputs in the form of goods and or
 services The relationship of operations management to senior management in commercial contexts can be compared to the
 relationship of line officers to highest level senior officers in military science The highest level officers shape the strategy and
 revise it over time while the line officers make tactical decisions in support of carrying out the strategy In business as in
 military affairs the boundaries between levels are not always distinct tactical information dynamically informs strategy and
 individual people often move between roles over time Contents 1 Introduction 8 1 1 What is Operations Management 8 1 2
